SUMMARY OF INDUSTRY IN WHICH THE COMPANY IS OPERATING

• PLASTIC PACKAGING INDUSTRY

The India Packaging Market was valued at USD 50.5 billion in 2019, and it is expected to reach USD 204.81 billion by 2025, registering a CAGR of 26.7% during the period of 2020-2025. Packaging is among the high growth industries in India and developing @ 22-25% per annum and becoming a preferred hub for packaging industry. Currently the 5th largest sector of India's economy, the industry has reported steady growth over past several years and shows high potential for much expansion, particularly in the export market. Costs of processing and packaging food can be up to 40% lower than parts of Europe which, combined with India's resources of skilled labour, make it an attractive venue for investment. A high degree of potential exists for almost all user segments which are expanding appreciably - processed foods, hard and soft drinks, fruit and marine products.

The Indian packaging industry has made a mark with its exports that comprise flattened cans, printed sheets and components, crown cork, lug caps, plastic film laminates, craft paper, paper board and packaging machinery, while the imports include tinplate, coating and lining compounds and others. In India, the fastest growing packaging segments are laminates and flexible packaging, especially PET and woven sacks. Over the last few years Packaging Industry is an important sector driving technology and innovation growth in the country and adding value to the various manufacturing sectors including agriculture and FMCG segments.

The global packaging industry is developing and expanding day by day and Indian packaging industry is also growing rapidly. This growth is primarily driven by factors like growing pharmaceutical, food processing, manufacturing industry, FMCG, healthcare sector and ancillary in the emerging economies like China, India, Brazil, Russia and few other East European countries

• FERTILIZER SECTOR IN INDIA

Fertilizers have played an essential role in agricultural production, providing vital nutrients for crops and registering increasing demands over the years. As an agrarian country, India is home to numerous small and marginal

farmers and is often plagued by low productivity and low quality. Crops are mainly rain-fed and cultivated on a single piece of land over time, decreasing soil fertility in many regions. Thereby, increasing quantities of nitrogen fertilizers have been used in the country. Because of this, the Indian government has brought about economic reforms and has ensured that fertilizers are available at affordable prices to increase productivity. Due to subsidy eligibility on notified fertilizers, the Indian fertilizer industry has been able to provide enhanced food security for the country. While agriculture is heavily dependent on the use of fertilizers, the government has met almost all demand for chemical fertilizers.

As one of the country's eight core industries, fertilizer production has had positive growth since 2014 until 2021. India is among the largest consumers of fertilizers in the world, with domestic sales continually growing. Among the various types, NPK fertilizers are the most common ones, and urea stands as the most highly consumed fertilizer. However, the domestic consumption of urea was higher than the volume produced domestically. Domestic production has decreased due to the closure of many urea plants, and accordingly, the share of imported urea has increased considerably in the past years. Apart from importing crude and manufactured fertilizers, the country is heavily dependent on importing raw materials such as rock phosphate, ammonia, and phosphoric acid. The value of India's fertilizer imports was estimated over 500 billion Indian rupees during fiscal year 2020.

Any investment in equity securities involves a high degree of risk. Investor should carefully consider all the information in this Red Herring Prospectus, including the risks and uncertainties described below, before making an investment in our Equity Shares. To obtain a more complete understanding, you should read this section together with Chapters titled, “Business Overview”, “The Issue”, “Industry Overview”, “Restated Financial Information”, “Outstanding Litigation and Other Material Developments”, and “Management’s Discussion and Analysis of Financial Condition and Results of Operations” beginning on page 128, 50, 114, 199, 217 and 200 respectively, as well as the other financial and statistical information contained in this Red Herring Prospectus.

Any of the following risks, as well as the other risks and uncertainties discussed in this Red Herring Prospectus, could have an adverse effect on our business, financial condition, results of operations and prospects and could cause the trading price of our Equity Shares to decline, which could result in the loss of all or a part of your investment. The risks and uncertainties described in this section are not the only risks that we may face. Additional risks and uncertainties not known to us or that we currently believe to be immaterial may also have an adverse effect on our business, results of operations, financial conditions and Red Herring Prospects.

This Red Herring Prospectus contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those anticipated in these forward-looking statements because of certain factors, including the considerations described below and elsewhere in this Red Herring Prospectus.

The financial and other related implications of risks concerned, wherever quantifiable, have been disclosed in the risk factors mentioned below. However, there are certain risk factors where the effect is not quantifiable and hence has not been disclosed in such risk factors. You should not invest in this Issuing unless you are prepared to accept the risk of losing all or part of your investment, and you should consult your tax, financial and legal advisors about the consequences to you of an investment in the Equity Shares.

The financial information in this section is, unless otherwise stated, derived from our Restated Consolidated Financial Statements prepared in accordance with Indian GAAP, as per the requirements of the Companies Act, 2013, and SEBI (ICDR) Regulations.

The Risk factors have been determined on the basis of their materiality. The following factors have been considered for determining the materiality.

- 1. Some risks may not be material individually but may be material when considered collectively.*
- 2. Some risks may have material impact qualitatively instead of quantitatively.*
- 3. Some risks may not be material at present but may have a material impact in the future.*

INTERNAL RISK FACTORS:

- 1. We do not own our Registered Office, Corporate Office and manufacturing facility. A failure to renew our existing lease arrangements at commercially favourable terms or at all may have a material adverse effect on our business, financial condition, and results of operations.***

Our registered office (Delhi) and Corporate Office (Noida) and our manufacturing facility (Shahjahanpur) are not owned by us. We have obtained these properties on rent/lease basis. Any termination of the lease in connection with these properties or our failure to renew the same, in a timely manner or at all could adversely affect our operations.

If we are required to vacate the current premises, we would be required to make alternative arrangements for our business activities and we cannot assure that the new arrangements will be on commercially acceptable/favourable terms. If we are required to relocate our business operations during this period, we may suffer a disruption in our operations or have to pay higher charges, which could have an adverse effect on our business, prospects, results of operations and financial condition.

However, there is no conflict of interest between the lessor of the immovable properties and our Company, Promoters, Promoter Group, Key Managerial Personnel, Directors and the Subsidiary/Group Companies and its directors except our corporate office (Noida), which is owned by our promoter and director Mr. Yashpal Singh Yadav.

- 2. As of the date of this Red Herring Prospectus, there are outstanding legal proceedings involving our Company, our Subsidiaries and our Promoters and Directors. Any adverse outcome in such legal proceedings may affect our reputation, business, results of operations and financial condition.***

There are outstanding legal proceedings involving our Company, our Subsidiaries, our Promoters and Directors which are pending at different levels of adjudication before various courts, tribunals, enquiry officers, appellate tribunals and other authorities. If there are any rulings against us or any Promoters and Directors by the courts or tribunals, we may face financial and reputational losses and may have to make provisions in our financial statements, which could

increase our expenses and our liabilities and may have a material adverse effect on our business, results of operations and financial condition. A summary of the litigation is set out below:

Some case papers pertaining to cases filed against our Subsidiary Arawali Phosphate Limited (“Arawali”) are not available. Any adverse outcome in such legal proceedings may affect our reputation, business, results of operations and financial condition.

One Criminal case no. CRLMP/174/2019 filed by Chambal Fertilizer and Chemicals Limited against the State of Rajasthan and Others, including our Subsidiary, Arawali is pending in the High Court of Rajasthan, Jaipur Bench, under Section 482 Cr. PC. Two criminal cases numbering COMA/73/2020 in Court of Chief Judicial Magistrate, Panchkula and Cr. Reg, Case 169/2019 in Court of Asst. Chief Judicial Magistrate, Weir Taluka, Bharatpur have been filed by the State of Haryana and Rajasthan respectively through their respective Agriculture and Farmer Welfare Department against Arawali and its officials under Essential Commodities Act, 1955 read with Fertilizer (Inorganic, Organic Mixed) Control Order, 1985 on the basis of fertilizer samples. Another First Appeal No. F.A. 290/ 2012 was filed by Proprietor Agrawal Krishi Sewa Kendra, Ratlam against Arawali and Others in the High Court of Madhya Pradesh, Indore Bench for recovery of money. These cases are pertaining to the period before our Company acquired the Subsidiary, Arawali and the Company has no information nor any document pertaining to the said cases. Any

adverse outcome in such legal proceedings may affect our reputation, business, results of operations and financial condition.

3. The Company is dependent on few numbers of customers for sales. Loss of any of this large customer may affect our revenues and profitability.

Our company relies heavily on the top ten customers, whose contributions to our total sales were 90.75%, 90.85%, 87.15% and 97.20% for the period ended on June 30, 2024, year ended on March 31, 2024, 2023 and 2022 respectively. Our primary focus is on manufacturing high-quality HDPE and PP bags using HDPE granules and Zinc Sulphate. The success of our business operations is intricately tied to these customers, and any potential loss or reduction in business from them could have adverse effects on our sales, overall business, and operational results.

The potential impact of losing significant or key customers or experiencing a decline in the business volume from them, poses risks to our business, financial condition, and cash flows. There is no guarantee that we can maintain the historical levels of business, negotiate favourable long-term contracts, or substantially reduce customer concentration in the future. Factors such as changes in demand, heightened competition, or a deviation from our quality standards could potentially affect our ability to retain these key customers.

While our existing customers play a crucial role in contributing significantly to our revenue, we acknowledge the inherent uncertainties in the business environment. The ongoing evolution of our customer base is a natural outcome of continually onboarding new customers as part of our ordinary business practices. While we are optimistic about sustaining positive relationships with current customers and attracting new ones, it's important to recognize that maintaining these relationships over the long term is not guaranteed. The dynamic nature of the business environment introduces uncertainties, and despite our efforts to expand and diversify our customer base, the outcome is subject to various factors beyond our control.

4. We derive 69.44%, 70.35%, 77.63% and 74.50% of our revenue from operation from top two customer during the period ended on June 30, 2024 and fiscal year ending on March 31, 2024, 2023 and 2022 respectively. If such customers choose not to source their requirement from us, our business, financial condition and result of operation may be adversely affected.

We significantly depend on above customer for our revenues. Contribution of revenue from top 2 customer is tabulated below:

Particular	Amount in INR in Lakh			
	As on June 30, 2024	As on March 31, 2024	As on March 31, 2023	As on March 31, 2022
*Revenue from Operation	4,039.46	12,341.77	11,555.26	9,184.34
Revenue from Krishak Bharati Co-Operative Ltd	2237.33	6395.93	6,172.77	3869.96
% of Revenue from Krishak Bharati Co-Operative Ltd.	55.39%	51.82%	53.42%	42.14%
Revenue from Kribhco Fertilizers Ltd.	567.66	2286.32	2797.11	2972.03
% of Revenue from Kribhco Fertilizers Ltd.	14.05%	18.53%	24.21%	32.36%

**Based on the restated consolidated financials*

We significantly depend on our above customers for major portion of our sales and any loss of Krishak Bharati Co-Operative Ltd & Kribhco Fertilizers Ltd. as customer for any reason, could have an adverse effect on our business, results of operation and financial condition.

5. We do not have long-term agreements with suppliers for our raw materials and an increase in the cost of, or a shortfall in the availability or quality of such raw materials could have an adverse effect on our business and results of operations.

Our business depends on the availability of reasonably priced, high quality raw materials in the quantities required by us and we depend on a few suppliers for procurement of raw materials, required for manufacturing our products. Top ten suppliers of our company for period ended on June 30, 2024, year ended on March 31, 2024, March 31, 2023 and March 31, 2022 contributed for 74.51%, 65.18%, 65.69% and 79.26%, respectively of our purchases

We do not have established long-term contracts with our suppliers, and raw material prices are determined through quotes from various sources. The absence of formal agreements means suppliers are not contractually obligated to prioritize our supply needs, leaving them free to sell to our competitors. The unavailability or insufficient quantity of raw materials, or the use of substandard quality, could significantly and negatively impact our business.

Moreover, any interruption in production by our suppliers or their failure to adhere to delivery schedules, quality standards, or required quantities may disrupt our manufacturing schedule. There is no guarantee that our suppliers will consistently meet our demands, and the possibility of occasional shortages or delays in the supply of raw materials exists due to factors like high demand or capacity constraints.

Furthermore, the non-exclusive nature of our relationships with suppliers exposes us to the risk of competitors offering more favourable terms, potentially causing suppliers to divert their resources. The continuation of our associations with suppliers on reasonable terms is uncertain.

6. Our Company markets its products through Krishak Bharati Co-operative Limited. In case of non-fulfillment of agreement obligations or cancellation of the agreement, under its terms or pre-maturely, we may not be able to generate the required sales and lose market share, thus affecting our revenues and profitability.

Our Company has entered into Memorandum of understanding with Krishak Bharati Co-operative Limited (KRIBHCO) for the distribution, marketing and promotion of the Zinc Sulphate through their network of Cooperative societies, Private dealer and own dealer and retail outlets called Krishak Bharati Sewa Kendra (KBSKs) on the term and conditions agreed under the MOU dated July 09, 2023. As per the marketing agreement between APFL and KRIBHCO is critical for our business, as KRIBHCO has the exclusive right to market up to 50% of our zinc sulphate production at the Shahjahanpur Plant in states where we holds the necessary licenses and permissions under the Fertilizer Control Order, 1985. The purchase rates are determined through mutual agreement, considering prevailing market prices. The termination or cancellation of this agreement by KRIBHCO could result in the loss of a significant client, impacting our ability to market a substantial portion of our zinc sulphate production.

7. There are certain discrepancies and delay filing in our statutory records relating to filing of necessary filing with the concerned Registrar of Companies.

In the past, there were instances of non-filings, incorrect filings, or delays in filing statutory forms with the RoC. These delays not only disrupted regulatory compliance but also raised questions about the company's efficiency and reliability in meeting legal obligations, potentially tarnishing its reputation and credibility in the business environment. These were later rectified, accompanied by additional fees. Any monetary penalties or punitive actions from authorities against the company, its directors, or officers could adversely impact its business, financial condition, and operational results.

9. *One of the business vertical of our business is Fertiliser & the same is dependent on the performance of the agricultural sector in which our fertilizers are used. Any developments affecting the performance of the agricultural sector are likely to affect our business, results of operations and financial condition.*

One of our business vertical i.e. fertilizer business is closely tied to the performance of the agricultural sector, where our fertilizers are used. The demand for our products hinges on factors beyond our control, including the extent of land under cultivation, soil quality, climatic conditions such as rainfall and the sufficiency of the monsoon, availability of water, crop prices, and farmers' access to credit. Additionally, the cropping pattern, which can vary annually for major crops, plays a crucial role in determining the demand for our fertilizers. Any decrease in cultivated land, unfavourable cropping patterns, adverse weather conditions, irregular or insufficient monsoons, or other factors impacting the agricultural sector's performance may have adverse effects on our business, financial results, and overall financial condition.

Further, the market demand for our products is influenced by various factors, including agricultural commodity prices, population growth, shifts in dietary preferences, and changes in planted acreage and fertilizer application rates. A decrease in agricultural commodity prices may lead to a reduction in agricultural production, subsequently impacting the demand for fertilizers and exerting downward pressure on fertilizer prices. Additionally, the adoption of alternative products and techniques, such as genetically modified organisms (organisms with altered genetic material through genetic engineering) designed to enhance crop yields with reduced fertilizer requirements, could contribute to a decline in fertilizer demand and prices. Such trends have the potential to negatively impact our business and financial performance.

10. *The company's current manufacturing facility in Shahjahanpur, U.P which is pivotal to our exclusive production of goods. Any unscheduled slowdowns, shutdowns, or underutilization of this facility could significantly impact business, financial condition, and operational results.*

Effective response and resolution to disruptions at our Shahjahanpur facility are critical to preventing adverse consequences. Operational risks encompass workforce efficiency, power grid issues, regulatory compliance, and

unforeseeable events like equipment failures, facility obsolescence, labour disputes, accidents, and natural disasters. Malfunctions in machinery may lead to substantial repair costs, particularly for capital-intensive equipment.

Furthermore, socio-political, economic, or environmental disruptions in the facility's region, or changes in state or local policies, may necessitate temporary or permanent operations suspension. This could result in significant capital expenditure and a strategic shift. Inability to adapt to such events, optimize manufacturing facilities, or embrace technological changes may adversely affect business, financial condition, and operational results.

In past, we have incurred mechanical shutdowns due to non-functioning of some of the spares and parts of our HDPE Bags Unit, which was subsequently replaced and made functional in due time. To prevent such incidents, the company regularly maintains its machinery and incurs Repairs & Maintenance expenses which is as disclosed below:

As on the date of this Red Herring Prospectus, majorly our revenue from operation is derived from the State of Uttar Pradesh. Depending heavily on revenue from a single state exposes the company to several risks, primarily associated with geographical concentration. Any economic instability within the state could directly and immediately impact our business adversely. Failure by us to renew, maintain or obtain the required permits or approvals at the requisite time may result in the interruption of our operations and may have an adverse effect on our business, financial condition and results of operations. Further, we cannot assure that the approvals, licenses, registrations and permits issued to us would not be suspended or revoked in the event of non-compliance or alleged non-compliance with any terms or conditions thereof, or pursuant to any regulatory action. 17. One of our objects of the issue includes Setting up new Project for Subsidiary Company, Yara Green Energy Private Limited, which is time consuming for set up.

The initiation of a project setup constitutes a multifaceted and time-extensive undertaking, often encompassing a duration around one year or more. Within this timeframe, there exists the prospect of encountering various risks and challenges, including but not limited to cost overruns and the escalation of associated expenses. While undertaking a project setup, some unforeseen expenses may arise i.e. Fluctuations in the cost of raw materials can be a significant factor, impacting budgetary allocations. Additionally, unexpected increases in labour costs, due to market demands or regulatory changes, can contribute to unanticipated financial burdens. Compliance costs may escalate if there are alterations in regulatory requirements or if unforeseen compliance challenges emerge during the project's execution. Government charges, fees, or taxes may also vary unexpectedly, influencing the overall project expenditure. Moreover, rapid technological changes can necessitate adjustments to the project plan, incurring additional expenses for updated equipment or skill training. Effectively managing these potential cost escalations requires thorough risk assessment, strategic planning, and a robust contingency framework to ensure the project's financial resilience and successful implementation.

Our Company has not identified any alternate source of funding for our object of the Issue and hence any failure or delay on our part to mobilize the required resources or any shortfall in the Issue proceeds can adversely affect our growth plan and profitability. The delay/shortfall in receiving these proceeds could result in inadequacy of funds or may result in borrowing funds on unfavourable terms, both of which scenarios may affect the business operation and

financial performance of the company. We derive 100% of our revenue from operations from India. Such geographical concentration of our business in this region heightens our exposure to adverse developments related to competition, as well as economic and demographic changes in this region which may adversely affect our business prospects, financial condition and result of operations. The concentration of our business in manufacturing of open ended yarn, subjects us to various risks, including but not limited to:

- Regional slowdown in Industrial activities;
- vulnerability to change of policies, laws and regulations or the political and economic environment;
- constraint on our ability to diversify across states; and
- perception by our potential clients that we are a regional company, which may hamper us from competing or securing orders for large and complex projects at the national level.

Further, factors such as competition, culture, regulatory regimes, business practices and customs, behavior and preferences in the Countries and State where we may plan to expand our operations may differ from India, and our experience in the India may not be applicable to such other Countries. In addition, as we enter new markets and geographical areas, we are likely to compete not only with national player, but also local players who have an established local presence, are more familiar with local regulations, business practices and customs, have stronger relationships with local contractors/service provider. We may not be able to leverage our experience in these regions to expand our operations in other parts of India and outside India.

Employee misconduct or errors could expose us to business risks or losses, including regulatory sanctions and damage our reputation. There can be no assurance that we will be able to detect or deter such misconduct. Moreover, the precautions we take to prevent and detect such activity may not be effective in all cases. Our employees may also commit errors that could subject us to claims and proceedings for alleged negligence, as well as regulatory actions on account of which our business, financial condition, results of operations and goodwill could be adversely affected.

21. Failure to successfully implement our business strategies may materially and adversely affect our business, prospects, financial condition and results of operations.

Implementation of our strategies may be subject to a number of risks and uncertainties, some of which are beyond our control. There can be no assurance that we will be able to execute our growth strategy on time and within the estimated costs, or that we will meet the expectations of our clients. In order to manage growth effectively, we must implement and improve operational systems, procedures and controls on a timely basis, which, as we grow and diversify, we may not be able to implement, manage or execute efficiently and in a timely manner or at all, which could result in delays, increased costs and diminished quality and may adversely affect our results of operations and our reputation. Any failure or delay in the implementation of any of our strategies may have a material adverse effect on our business, prospects, financial condition and results of operations.

22. Our Company and its subsidiaries has availed unsecured loans which are repayable on demand. Any demand from lenders for repayment of such unsecured loans, may adversely affect our cash flows.

As of June 30, 2024 our consolidated restated financials indicate total debts amounting to ₹ 4,794.51 Lakhs, with a corresponding Debt Equity ratio of 1.07.

The extent of our indebtedness carries significant implications, including:

-
- Heightened susceptibility to adverse economic, industry, and competitive conditions;
 - Restricted flexibility in adapting to changes within our business and industry;
 - Impact on our credit rating;
 - Constrained capacity to secure additional financing presently and in the future;
 - Escalated interest expenditure, negatively influencing profitability, as the majority of our debt incurs interest at variable rates.

24. Our lenders possess a legal charge on both our movable and immovable properties in relation to the financial facilities extended to us.

As per Restated consolidated financials, our company has obtained secured loans from banks, using movable and immovable properties as collateral, with an outstanding amount of ₹ 4214.48 lakhs as of June 30, 2024. Additionally, in the event of any delay in completion of such capital expenditure, the proposed schedule implementation and deployment of the Net Proceeds may be extended or may vary accordingly. We cannot assure you that we will be able to undertake such capital expenditure within the cost indicated by such quotations or that there will not be cost escalations. The objects of the Fresh Issue have not been appraised by any bank or financial institution, and our funding requirements and the proposed deployment of the Net Proceeds are based on management estimates based on current market conditions. In the absence of such independent appraisal, the deployment of the Net Proceeds is at our discretion. We may have to revise our expenditure and funding requirements as a result of variations in costs, estimates, quotations or other external factors, which may not be within the control of our management. The funds that we receive would be utilized for the objects of the Issue as has been stated in the chapter titled "**Objects of The Issue**" beginning from page 81 of this Red Herring Prospectus. The proposed schedule of implementation of the objects of the Issue is based on our management's estimates. 27. Changes in technology may render our current technologies obsolete or require us to make substantial investments.

To remain competitive and efficient, modernization and technology upgradation are crucial for reducing costs and increasing output. Our business heavily relies on technology and machinery to deliver quality services. However, there is a risk of our technology and machinery becoming obsolete over time or not being upgraded timely, which can adversely impact our operations and financial condition, leading to a loss of competitive edge in the market. While we believe that we have implemented updated technology, we understand the importance of continuous improvement. We are committed to staying abreast of the latest technological standards and trends to enhance our capabilities. In the event of a new technology emerging in our industry, we may be required to invest in adopting that technology or upgrading our existing machinery and equipment to remain competitive. The costs associated with upgrading technology and modernizing machinery are significant, and they can have a substantial impact on our finances and operations. These investments may lead to higher capital expenditures and can temporarily affect our profitability and cash flow. We must carefully assess the potential benefits and returns on such investments to ensure they align with our long-term growth objectives. Our ability to successfully implement technology upgrades and modernization efforts depends on various factors, including availability of skilled technicians, compatibility of new technology with existing systems, and adequate financial resources. Delays or challenges in adopting new technology can hinder our operational efficiency and competitiveness in the market.

28. Our insurance coverage may not be adequate to protect us against certain operating hazards and this may have a material adverse effect on our business.

Our Company has obtained insurance coverage in respect of certain risks. While we believe that we maintain insurance coverage in adequate amounts consistent with size of our business, our insurance policies do not cover all risks. Our operations are subject to hazards inherent in project sites such as risk of equipment failure, work accidents, fire, earthquakes, flood and other force majeure events, acts of terrorism and explosions including hazards that may cause injury and loss of life, severe damage to and the destruction of property and equipment and environmental damage. Long periods of business disruption could result in a loss of customers. Although we take precautions to minimize the risk of any significant operational problems at our engineering projects, and we have not experienced any such material incidents in the past, there can be no assurance that we will not face such disruptions in the future. The details relating to insurance expenses incurred by our company in the reporting period is mentioned below:

Particulars	(Rs. in lakhs)			
	For the Period/ Year ended on			
	March 31, 2022	March 31, 2023	March 31, 2024	June 30, 2024
Insurance Expenses	11.83	4.12	12.50	1.38
Total expenses	9,143.61	10,998.54	11,315.94	3,349.91
% of Total Expenses	0.13%	0.04%	0.11%	0.04%

We may be exposed to various risks which we may not be able to foresee or may not have adequate insurance coverage. Our insurance coverage may not be adequate to cover such loss or damage to life and property, and any consequential losses arising due to such events will affect our operations and financial condition. Further, in addition to the above, any such fatal accident or incident causing damage or loss to life and property, even if we are fully insured or held not to be liable, could negatively affect our reputation, thereby making it more difficult for us to conduct our business operations effectively, and could significantly affect our business, availability of insurance coverage in the future and our results of operations. The occurrence of any one of the above events may result in us being named as a defendant in lawsuits asserting claims for substantial damages, including for personal injury and property damage and fines

and/or penalties. While we believe that the insurance coverage that we maintain is in accordance with industry standards, there can be no assurance that any claim under the insurance policies maintained by us will be honoured fully, in part or on time, or that we have taken out sufficient insurance to cover all material losses. To the extent that we suffer loss or damage for which we did not obtain or maintain insurance, that is not covered by insurance or exceeds our insurance coverage, the loss would have to be borne by us and our cash flows, results of operations and financial performance could be adversely affected. In the event that our Company files a claim under the applicable insurance policy, there is no assurance that we will be able to recover all, or part of the losses incurred.

29. *Delays or defaults in payments from our customers could result in reduction of our profits.*

The potential for delays or defaults in customer payments poses a risk to our profitability. While we extend credit facilities based on payment history and financial condition, credit risk, particularly from trade receivables, persists. Hence, we are exposed to this credit risk from our operating activities specifically from trade receivables. The average receivable days as on June 30, 2024 was 53 days. As on March 31, 2024, March 31, 2023 and March 31, 2022, we had an outstanding trade receivable on standalone basis, aggregating ₹ 1,332.11 lakhs, ₹ 888.39 lakhs and ₹ 924.85 lakhs respectively, constituting 11.50%, 8.71% and 10.07% respectively, of our standalone revenue from operations during the respective years. Further as on June 30, 2024, March 31, 2024, March 31, 2023 and March 31, 2022 trade receivables on standalone basis aggregating to ₹ 391.10 Lakhs, ₹ 273.34 Lakhs, ₹ 149.38 Lakhs and ₹ 421.90 lakhs are those which are more than 1 year.

Our operational results and profitability are contingent on customer creditworthiness. We cannot guarantee timely or complete payments, as customers may have weak credit histories. Adverse changes in customer financial conditions may impact their payment capabilities. Any increase in receivable turnover days or write-offs may adversely affect our business. Defaults or delays in customer payments would impact cash flow, operational results, and financial condition adversely.

30. *Our ability to pay dividends in the future will depend upon our future earnings, financial condition, cash flows, working capital requirements, capital expenditure and restrictive covenants in our financing arrangements.*

We may retain all our future earnings, if any, for use in the operations and expansion of our business. As a result, we may not declare dividends in the foreseeable future. Any future determination as to the declaration and payment of dividends will be at the discretion of our Board of Directors and will depend on factors that our Board of Directors deem relevant, including among others, our results of operations, financial condition, cash requirements, business prospects and any other financing arrangements. Accordingly, realization of a gain on shareholders investments may largely depend upon the appreciation of the price of our Equity Shares. There can be no assurance that our Equity Shares will appreciate in value. For details of our Dividend history refer to the Section “*Dividend Policy*” on page 147 of the Red Herring Prospectus. While we have paid dividends in the past, there can be no assurance as to whether we will pay dividends in the future and, if so, the level of such future dividends.

31. *Fraud, theft, employee negligence or similar incidents may adversely affect our results of operations and financial condition.*

Our company faces potential risks related to incidents of theft or damage to inventory. While we have not encountered such situations in the past, we acknowledge that there is a possibility of experiencing inventory losses due to various factors such as employee theft, vendor fraud, and general administrative errors. These incidents could have a negative impact on the results of operations and financial condition. During the execution of the contract and up to defect liability period we are generally fully liable to compensate all concerned for any loss, damage, or destruction of work, structure, property etc. including third party risk arising due to causes attributable to us. Despite implementing security measures and internal controls, there is no guarantee that we will completely avoid instances of fraud, theft, employee negligence, or security lapses in the future. Any such occurrence could lead to significant financial losses and affect our overall business performance. Although we have insurance coverage against losses due to theft, fire, breakage, or damage caused by other casualties, the extent of coverage may not fully mitigate the financial impact of such incidents on our operations and financial condition. In some cases, the losses incurred may exceed the insurance coverage, resulting in additional financial strain for the company.

32. *In the event there is any delay in the completion of the Issue, or delay in schedule of implementation, there would be a corresponding delay in the completion of the objects of this Issue which would in turn affect our revenues and results of operations*

The funds that we receive would be utilized for the objects of the Issue as has been stated in the chapter titled “*Objects of The Issue*” on Page no. 69 of this Red Herring Prospectus. The proposed schedule of implementation of the objects of the Issue is based on our management’s estimates. If the schedule of implementation is delayed for any other reason whatsoever, including any delay in the completion of the Issue, it may adversely affect our revenues and results of operations.

33. *We are dependent on our Promoters, our senior management and other key personnel, and the loss of, or our inability to attract or retain, such persons could affect our business, results of operations, financial condition and cash flows*

Our performance depends largely on the efforts and abilities of our promoters, senior management and other key personnel. They have gained experience in this line of business and have over the years built relations with our customers and other persons who are connected with us and have been actively involved in the day to day operations and management, further we believe that the inputs and experience of our senior management, in particular, and other key personnel are valuable for project development and procurement activities, and our overall business operations and the strategic directions taken by our Company. For details in relation to the experience of our key management personnel, see “*Our Management*” on page 131 of this Red Herring Prospectus. We cannot assure you that these individuals or any other member of our senior management team will not leave us or join a competitor or that we will be able to retain such personnel or find adequate replacements in a timely manner, or at all. We may also be required to increase our levels of employee compensation more rapidly than in the past to remain competitive in attracting employees that our business requires. The loss of the services of such persons may have an effect on our business, results of operations, financial condition and cash flows

34. *If we are not successful in managing our growth, our business may be disrupted, and our profitability may be reduced.*

In recent years, our company has achieved substantial growth, with total revenues on restated consolidated basis of ₹ 4,039.46 Lakhs, ₹ 12,341.77 Lakhs, ₹ 11,555.26 Lakhs and ₹ 9184.34 lakhs, and profits attributable to owners of ₹ 441.00 Lakhs, ₹ 957.55 Lakhs, ₹ 471.30 Lakhs and ₹ 70.22 Lakhs for the stub period ending on June 30, 2024 and FY 2023-24, FY 2022-23 and FY 2021-22, respectively. While we anticipate continued significant growth, this expansion will impose substantial demands on our organization. It necessitates ongoing enhancements in operational, financial, and internal control frameworks. However, our growth prospects are vulnerable to risks, including potential challenges in project execution due to a sudden surge in orders, difficulties in securing adequate working capital, and potential talent acquisition challenges. Despite our strategic intent for expansion, there is no assurance that our growth trajectory will replicate historical trends. The realization of future growth hinges on our ability to navigate and mitigate risks in a dynamically changing business environment.

35. *Our Business requires deployment of labour and depend on availability of labour. In case of unavailability of such labour, our business operations could be affected.*

Our business operations require deployment and our ability to retain labour. In case such labour workforce is unavailable, or we are unable to identify and retain such labour our business could be adversely affected. We cannot guarantee that we may be able to continue with the same on favourable terms or at all. Any such failure may impact the operations, business process and profitability. Additionally, there have been amendments in the labour and Employment related laws, which may have a direct impact on our employee costs and consequently, on our margins. Further, latest amendments in labour laws in India may be lead to increasing cost of compliance, wages, social security, Occupational Safety, Health and Working Conditions. We cannot assure you that we will continue to comply with all these labour related laws and that as we continue to grow our business in the future, our labour and employee costs coupled with operating compliances and expenses will not significantly increase. Our employees are not unionized currently. However, there is no assurance that our employees will not seek unionization in the future. In the event that employees at our manufacturing facility take any steps to unionise, it may become difficult for us to maintain flexible labour policies and may increase our costs and adversely affect our business. Any strikes or lock-outs, work stoppages, slowdowns, shut downs, supply interruptions or costs or other factors beyond our control, may disrupt our operations and could negatively impact our financial performance or financial condition. Additionally, our inability to recruit employees, in particular skilled employees and retain our current workforce could have a material adverse effect on our business, financial condition and profitability. There can be no assurance that we will not experience slowdowns or shutdowns in the manner described above, or in any other manner, in the future, for reasons which are beyond our control. Any slowdown or shutdown will adversely impact our results of operations, market share and financial condition.

36. *Failure to manage our inventory could have an adverse effect on our net sales, profitability, cash flow and liquidity.*

The performance of our business hinges significantly on our adept management of inventory and stock levels. Effectively navigating this requires precise estimations of customer demand and supply requisites, aligning production and trade of inventory accordingly. Any misjudgment in forecasting customer demand may result in product shortages or an accumulation of excess inventory, potentially adversely impacting our results. Failure to sell manufactured inventory could necessitate write-downs or financial commitments without corresponding purchases, creating adverse effects on income and cash flows. Sales estimates are grounded in forecasts, demand assessments, and customer specifications.

External factors, such as natural disasters (e.g., earthquakes) or extreme weather conditions (e.g., floods, droughts), have the potential to disrupt the supply of raw materials and local transportation, posing risks to our operations. A

disruption in the supply chain may impede our ability to secure alternative sources promptly, adversely affecting our business, profitability, and reputation. While we have not encountered disruptions in product delivery in the past due to issues like poor handling, transportation bottlenecks, or labour strikes, there is no guarantee that such incidents won't occur in the future.

To enhance our operational resilience, we strategically maintain inventory at our manufacturing facility. Achieving an optimal inventory level is crucial, enabling us to respond effectively to customer demand. Overstocking could escalate capital requirements and incur additional financing costs, while understocking may jeopardize our ability to meet customer demand, adversely impacting operating results. Any misalignment between our planning and actual consumer consumption may lead to potential excess inventory or out-of-stock scenarios, both of which could adversely affect our business, financial condition, and operational results.

In summary, our ability to accurately forecast, manage, and adapt to customer demand and external disruptions in the supply chain plays a pivotal role in sustaining a robust and resilient business model.

37. We may be subject to third-party indemnification, liability claims or invocation of guarantees, which may adversely affect our business, cash flows, results of operations and reputation.

Certain agreements with third parties impose indemnity obligations on us, necessitating compensation in the event of a default or breach by us, resulting in loss or damage to such third parties. Should these indemnity clauses be invoked successfully, we may be obligated to compensate them for losses suffered under the respective agreements, potentially impacting our financial condition adversely.

For a comprehensive overview of industry regulations, please refer to "**Key Industry Regulation**" on page 165. Additionally, details concerning ongoing litigation related to claims arising from defaults in our developments can be found in "**Outstanding Litigations and Material Development**" on page 217.

Moreover, there exists the possibility of third-party liability claims for injuries or damages from our product. These liabilities and associated costs have the potential to adversely affect our business, cash flows, operational results, and overall reputation.

38. The average cost of acquisition of Equity shares by our Promoter is lower than the Issue price.

Our Promoter's average cost of acquisition of Equity shares in our Company is lower than the Issue Price of Equity shares as given below:

Sr. No.	Name of Promoter	No. of Equity Shares held	Average Cost of Acquisition per equity share (in ₹) ^{@*}
1.	Mr. Yashpal Singh Yadav	5,14,27,607	3.64
2.	Anya Agro & Fertilizers Pvt. Ltd.	2,70,55,435	3.64

[@] Pursuant to the resolutions passed by our Shareholders on April 25, 2024, each equity share of our Company of face value of ₹ 10 each, fully paid-up, was sub-divided into One Equity Shares of our Company of face value of ₹ 02 each. Therefore, 18700948 equity shares of our Company of face value of ₹5.5 each held by Yashpal Singh Yadav were sub-divided into 5,14,27,607 Equity Shares of our Company of face value of ₹ 02 each.

*The average cost of acquisition of Equity Shares by our Promoters has been calculated by taking into account the amount paid by them to acquire Shares and Shares allotted to them and as reduced by amount received on sell of shares i.e. net of sale consideration is divided by net quantity of shares acquired.

39. In addition to regular remuneration, other benefits and expense reimbursement our Promoters, Directors, key managerial personnel or senior management hold a vested interest in our Company; to the extent of their shareholding and associated dividend entitlements. They also have a stake in transactions involving our company, whether with themselves individually or with our group companies/entities. Our Company in future may enter in related party transactions subject to necessary compliances.

Our Promoters, Directors, key managerial personnel or senior management are interested in our Company to the extent of their shareholding and associated dividend entitlements thereon in our Company, in addition to regular remuneration or benefits and expenses reimbursement. Our Promoters, Directors, key managerial personnel or senior management are interested in the transactions entered into between our Company and themselves as well as between our Company and our Group Company/Entity. All transactions with related parties entered into by the company in past were at arm's length basis, in compliance with applicable provisions of Companies Act, 2013 and other applicable provisions. Additionally, our Company may enter in related party transactions in future subject to necessary compliances in accordance with relevant acts, rules and regulations. For details of transactions already executed by our Company with our Promoters, Directors and Group Companies/Entities during last three years and stub period, please refer to the "**Annexure – V Note 19: Related Party Disclosure**" under the Chapter titled "**Restated Financial Information**" beginning on Page No. 148 of this Red Herring Prospectus. Furthermore, it is likely that we may enter into related

party transactions in the future. Any future transactions with our related parties could potentially involve conflicts of interest. Accordingly, there can be no assurance that such transactions, individually or in aggregate, will not have a material adverse effect on our business, financial condition, cash flows, results of operations and prospects.

40. *Our Promoters and the Promoter Group will jointly continue to retain majority shareholding in our Company after the issue, which will allow them to determine the outcome of the matters requiring the approval of shareholders.*

Our promoters along with the promoter group will continue to hold collectively up to 65.40% of the Equity share capital of the company. As a result of the same, they will be able to exercise significant influence over the control of the outcome of the matter that requires approval of the majority shareholder's vote. Such a concentration of the ownership may also have the affect of delaying, preventing or deterring any change in the control of our company. In addition to the above, our promoters will continue to have the ability to take actions that are not in, or may conflict with our interest or the interest of some or all of our minority shareholders, and there is no assurance that such action will not have any adverse effect on our future financials or results of operations.

41. *The Issue price of our Equity Shares may not be indicative of the market price of our Equity Shares after the Issue and the market price of our Equity Shares may decline below the Issue Price and you may not be able to sell your Equity Shares at or above the Issue Price.*

The Issue price of the equity shares have been based on many factor and may not be indicative of the market price of our Equity Shares after the Issue. For further information please refer the section titled "**Basis for Issue Price**" beginning on page 76 of the Red herring Prospectus. The market price of our Equity Shares could be subject to significant fluctuations after the Issue, and may decline below the Issue Price. We cannot assure you that you will be able to sell your Equity Shares at or above the Issue Price.

42. *Within the parameters as mentioned in the chapter titled "Objects of this Issue" of this Red Herring Prospectus, our Company's management will have flexibility in applying the proceeds of this Issue. The fund requirement and deployment mentioned in the Objects of this Issue have not been appraised by any bank or financial institution.*

The fund requisites and utilization, as delineated in the "**Objects of the Issue**" on page 81 of this Red Herring Prospectus, are predicated on our management's projections and have not undergone scrutiny by any financial institution, bank, or independent agency. These financial needs are contingent upon our existing business strategy; however, there is no assurance regarding the complete or partial execution of this strategy. Given the fiercely competitive and dynamic nature of our industry, adjustments to our business strategy may be necessary, potentially influencing corresponding fund requirements.

The allocation of funds, as specified in the "Objects of the Issue" section, is subject to the discretion of our Board of Directors and lacks external independent agency oversight. The Company's audit committee will supervise fund deployment and provide requisite disclosures in accordance with applicable regulations.

Furthermore, we cannot guarantee the precise alignment of actual costs or implementation timelines with the estimates outlined in the "**Objects of the Issue.**" Discrepancies may arise due to various factors, some beyond our control, possibly leading to delays in our business plans and adverse impacts on projected revenues and earnings. This information should be incorporated into the offer document for comprehensive disclosure to potential investors.

43. *Any future issuance of our Equity Shares may dilute prospective investors' shareholding, and sales of our Equity Shares by our major shareholders may adversely affect the trading price of our Equity Shares.*

Our growth is dependent on having a strong balance sheet to support our activities. In addition to the internally generated cash flow, we may need other sources of financing to meet our capital needs which may include entering into new debt facilities with lending institutions or raising additional equity in the capital markets. We may need to raise additional capital from time to time, dependent on business conditions. The factors that would require us to raise additional capital could be business growth beyond what the current balance sheet can sustain; additional capital requirements imposed due to changes in regulatory regime or significant depletion in our existing capital base due to unusual operating losses. Any fresh issue of shares or convertible securities would dilute existing holders, and such issuance may not be done at terms and conditions, which are favourable to the then existing shareholders of our Company. If our Company decides to raise additional funds through the incurrence of debt, our interest obligations will increase, and we may be subject to additional covenants, which could further limit our ability to access cash flows from our operations. Such financings could cause our debt to equity ratio to increase or require us to create charges or liens on our assets in favour of lenders. We cannot assure you that we will be able to secure adequate financing in the future on acceptable terms, in time, or at all. Our failure to obtain sufficient financing could result in the delay or abandonment of our expansion plans. Our business and future results of operations may be affected if we are unable to implement our expansion strategy. Any issuance of Equity Shares by our Company may dilute shareholding of investors in our Company; and hence affect the trading price of our Company's Equity Shares and its ability to raise capital through an issue of its securities. In addition, any perception by investors that such issuances or sales might occur could also affect the trading price of our Company's Equity Shares. Additionally the disposal, pledge or encumbrance of Equity Shares by any of our Company's major shareholders, or the perception that such transactions

may occur may affect the trading price of the Equity Shares. No assurance may be given that our Company will not issue Equity Shares or that such shareholders will not dispose of, pledge or encumber their Equity Shares in the future.

44. *The requirements of being a public listed company may strain our resources and impose additional requirements.*

We are not a publicly listed company and have not, historically, been subjected to the increased scrutiny of our affairs by shareholders, regulators and the public at large that is associated with being a listed company. As a listed company, we will incur significant legal, accounting, corporate governance and other expenses that we did not incur as an unlisted company. We will be subject to the SEBI Listing Regulations, which will require us to file audited annual and unaudited quarterly reports with respect to our business and financial condition. If we experience any delays, we may fail to satisfy our reporting obligations and, or, we may not be able to readily determine and accordingly report any changes in our results of operations as promptly as other listed companies. Further, as a publicly listed company, we will need to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, including keeping adequate records of daily transactions. In order to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, significant resources and management attention will be required. As a result, our management's attention may be diverted from our business concerns, which may adversely affect our business, prospects, results of operations and financial condition. Any further issuance of Equity Shares, or convertible securities or other equity-linked instruments by us may dilute your shareholding. We may be required to finance our growth through future equity offerings. Any future equity issuances by us, including a primary offering of Equity Shares, convertible securities or securities linked to Equity Shares including through exercise of employee stock options, may lead to the dilution of investors' shareholdings in our Company. Any future equity issuances by us or sales of our Equity Shares by the Promoters may adversely affect the trading price of the Equity Shares, which may lead to other adverse consequences including difficulty in raising capital through offering of our Equity Shares or incurring additional debt. In addition, any perception by investors that such issuances or sales might occur may also affect the market price of our Equity Shares. We cannot assure you that we will not issue Equity Shares, convertible securities or securities linked to Equity Shares or that our Shareholders will not dispose of, pledge or encumber their Equity Shares in the future.

45. *Industry information included in this Red Herring Prospectus has been derived from industry sources. There can be no assurance that such third-party statistical, financial and other industry information is complete, reliable or accurate.*

46. *One of our Segment of business, i.e. manufacturing of packing bags for fertilizers is subject to seasonal and cyclical volatility due to which there may be fluctuation in the sales of products which could lead to higher closing inventory position, which may adversely affect our business.*

We have historically experienced seasonal fluctuation in our sales in one of our Business Segment, i.e. Fertilizer Unit in the 3rd quarter of each Financial Year. We have also seen higher sales volume of products in a certain season. These seasonal variations in consumer demand subject one of our divisions to a considerable degree of volatility. As a result, our revenue and profits may vary during different quarters of the financial year and certain periods may not be indicative of our financial position for a full financial year or future quarters or periods and may be below market expectations.

47. *Changing regulations in India could lead to new compliance requirements that are uncertain. The regulatory environment in which we operate is evolving and is subject to change.*

The Government of India may implement new laws or other regulations that could affect the manufacturing industry or the sectors we serve, which could lead to new compliance requirements. New compliance requirements could increase our costs or otherwise adversely affect our business, financial condition and results of operations. Further, the manner in which new requirements will be enforced or interpreted can lead to uncertainty in our operations and could

adversely affect our operations. Our business and financial performance could be adversely affected by any unexpected or onerous requirements or regulations resulting from any changes in laws or interpretation of existing laws, or the promulgation of new laws, rules and regulations. Any such changes and the related uncertainties with respect to the implementation or change in the legal framework may have a material adverse effect on our business, financial condition and results of operations.

48. Our company has encountered challenges in meeting the designated timelines for filing statutory returns, a circumstance that carries significant implications for our financial standing.

These delays were primarily due to the administrative and technical errors. We have since taken steps such as channelling more resources towards improving our administrative systems and training our staff to rectify such delays. However, there can be no assurance that such delays may not arise in the future. This may lead to financial penalties from respective government authorities. While we have been required to make payment of fines/ penalties for delays in payment of such statutory dues, wherever applicable, these have not been material in nature. However, we cannot

assure you that we will not be subject to such penalties and fines in the future which may have a material adverse impact on our financial condition and cash flows.

EXTERNAL RISK FACTORS

1. *Our business and operations are based in India, exposing us to various economic, political, and market conditions in the country. These factors are often outside our control and can significantly impact our business environment.*

The Indian economy and capital markets are subject to the influence of economic, political, and market conditions both within India and globally. As we are incorporated in India, with nearly all of our business operations and personnel located in the country, our performance is inherently tied to various macroeconomic and demographic factors in India, many of which are beyond our control. Factors that have the potential to negatively impact the Indian economy, and consequently our operational results, may include:

Our business is intricately connected to the macroeconomic landscape, and various factors beyond our control may impact our operations. These include:

- Changes in Indian interest rates or inflation rates can significantly influence our business environment.
- Exchange rate fluctuations, currency controls, and restrictions on currency conversion or repatriation can affect our financial stability.
- Any scarcity of credit or financing in India may adversely impact economic conditions and our ability to secure financing for expansions.
- Prevailing income conditions among Indian consumers and corporates can impact our business.
- Volatility and trends in trading activity on India's principal stock exchanges can influence our operations.
- Changes in India's tax, trade, fiscal, or monetary policies can have wide-ranging effects on our business.
- Political instability, terrorism, military conflicts, or natural disasters in India or neighboring countries can disrupt operations.
- Epidemics, pandemics, or public health issues, such as the COVID-19 pandemic, can impact our operations and business environment.
- Regional or global economic conditions, especially in India's principal export markets, may affect our business.
- Any downgrading of India's debt rating by domestic or international rating agencies can impact our financial standing.

Specifically, our total income and profitability are linked to consumer discretionary spending in India, influenced by economic conditions, salaries, employment levels, and consumer confidence. Economic downturns, prolonged slowdowns, worsening economic conditions, increased unemployment, rising interest rates, or industry-wide cost pressures could impact consumer behavior and spending, leading to a decline in our total income and profitability.

While our results may not precisely mirror India's economic growth, the overall performance of the Indian economy shapes the context in which we operate. Any slowdown, real or perceived, in the Indian economy or specific sectors could adversely affect our business, results, financial condition, cash flows, and the price of our Equity Shares.

2. *Natural or man-made disasters, fires, epidemics, pandemics, acts of war, terrorist attacks, civil unrest, and similar occurrences. These events have the potential to materially and adversely affect the business operations.*

Various unpredictable events such as natural disasters (like typhoons, floods, and earthquakes), epidemics, pandemics (such as COVID-19), acts of war (e.g., Russia's invasion of Ukraine), terrorist attacks, and other occurrences, many of which are beyond our control, may contribute to economic instability, both in India and globally. This instability could significantly and adversely impact our business, financial condition, cash flows, and operational results.

Our operations are susceptible to disruption caused by fires, natural disasters, severe weather, and related damage to our technological infrastructure, leading to decreased productivity. Such events may necessitate personnel evacuation

and the suspension of operations. Incidents like terrorist attacks, civil unrest, and adverse social, economic, and political events in India could negatively affect us, potentially creating a perception that investing in Indian companies carries higher risks, impacting our business and the equity share prices.

The COVID-19 pandemic has had, and any future pandemic or widespread public health emergency could have, repercussions across regional and global economies and financial markets. The outbreak of COVID-19 in many countries, including India has significantly and adversely impacted economic activity and has contributed to significant volatility and negative pressure in financial markets, and it is possible that the outbreak of COVID-19 will cause a prolonged global economic crisis, recession or depression, despite monetary and fiscal interventions by governments and central banks globally.

The global impact of the outbreak has been rapidly evolving. As cases of COVID-19 have continued to be identified in additional countries, many jurisdictions, including the governments of India, have reacted by instituting restrictive measures including invoking lock downs and quarantines, requiring the closure of non-essential businesses and placing restrictions on the types of businesses that may continue to operate, mandating restrictions on travel, implementing “shelter-in-place” rules and “stay-at-home” orders, and enforcing remote working regulations. No prediction can be made of when any of the restrictions currently in place will be relaxed or expire, or whether or when further restrictions will be announced. Although some governments are beginning to ease or lift these restrictions, the impacts from the severe disruptions caused by the effective shutdown of large segments of the global economy or localized lockdowns remain unknown.

There can be no assurance that there will not be any material impact on our operations if the outbreak of COVID-19 is not effectively controlled. Although some restrictions have been eased, it is not yet clear when the lockdown conditions will be fully lifted in India. Further, although we were declared an essential business and were able to adjust our business to continue operating during the lockdown, there can be no assurance that further restrictions will not be introduced or that we will continue to retain such essential status. Further, we may be required to quarantine employees that are suspected of being infected of COVID-19, as well as others that have come into contact with those employees or shut down our manufacturing facilities as a health measure, which could have an adverse effect on our business operations or result in a delay in the production and supply of products to our customers in a timely manner. If any of our suppliers are affected by COVID-19 to the extent our supply chain is disrupted, this may affect our ability to meet the demand of our customers.

The full extent to which the COVID-19 pandemic, or any future pandemic or widespread public health emergency impacts our business, operations and financial results will depend on numerous evolving factors that we may not be able to accurately predict, including the scope, severity, and duration of the pandemic; actions taken by governments, business and individuals in response to the pandemic; the effect on customer demand for and ability to pay for our products; the disruptions or restrictions on our employees’ and suppliers’ ability to work and travel; volatility in foreign exchange rates; any extended period of remote work arrangements; and strain on our or our customers’ business continuity plans, and resultant operational risk.

The COVID-19 pandemic, or any future pandemic or widespread public health emergency could therefore materially and adversely impact our business, financial condition, cash flows and results of operations.

3. *A downgrade in ratings of India, may affect the trading price of the Equity Shares.*

Our borrowing costs and our access to the debt capital markets depend significantly on the credit ratings of India. India’s sovereign debt has been rated as Baa3 with a “stable” outlook by Moody’s in March 2023, BBB-with a “stable” outlook by Fitch in May 2023. Any further adverse revisions to India’s credit ratings for domestic and international debt by international rating agencies may adversely impact our ability to raise additional financing and the interest rates and other commercial terms at which such financing is available, including raising any overseas additional financing. A downgrading of India’s credit ratings may occur, for example, upon a change of government tax or fiscal policy, which are outside our control. This could have an adverse effect on our ability to fund our growth on favourable terms or at all, and consequently adversely affect our business, cash flows and financial performance and the price of the Equity Shares

4. *Changes in the taxation system in India could adversely affect our business.*

Our business and financial condition are susceptible to adverse effects stemming from alterations in the extensive tax regime imposed by central and state governments in India. The tax structure encompasses various levies such as income tax, turnover tax, goods and service tax (GST), stamp duty, and additional taxes introduced periodically. Interpretation of local tax laws, regulations, and the use of estimates regarding future operations pose challenges in determining our tax liability.

Significant tax reforms, including the Goods and Services Tax (GST) and the General Anti-Avoidance Rules (GAAR), have been implemented by the Government of India (GoI). The GST replaced multiple indirect taxes on goods and services, while GAAR aims to prevent tax avoidance. The newness of these regulations and their subjective interpretation introduce uncertainties.

Recent tax measures proposed in Finance Bill 2022 and Union Budget for Fiscal 2023, such as explaining sources of cash credits and introducing a 30% tax on income from virtual digital assets, could impact our business. The potential effects of these proposed measures on our customers, financial institution partners, and our industry are uncertain.

Companies operating in India may opt for different tax strategies, choosing deductions or exemptions or paying the higher corporate tax rate. Amendments in the Finance Act 2020 and subsequent Finance Acts, such as changes to the direct and indirect tax regime, have introduced complexities, including a simplified alternate direct tax regime and modifications to dividend distribution tax (DDT).

The unpredictability of future tax laws and regulations makes it challenging to anticipate their nature and impact on our business, financial condition, results of operations, and cash flows. Investors are advised to seek guidance from their tax advisors regarding the implications of investing in our Equity Shares. We cannot predict the enactment of tax laws or regulations or their potential material adverse effects on our business.

5. *The price of our Equity Shares may be volatile, or an active trading market for our Equity Shares may not develop.*

Prior to this Issue, there has been no public market for our Equity Shares. Our Company and the Book Running Lead Manager has appointed Spread X Securities Private Limited as Designated Market Maker for the equity shares of our Company. However, the trading price of our Equity Shares may fluctuate after this Issue due to a variety of factors, including our results of operations and the performance of our business, competitive conditions, general economic, political and social factors, the performance of the Indian and global economy and significant developments in India's fiscal regime, volatility in the Indian and global securities market, performance of our competitors, the Indian Capital Markets and Finance industry, changes in the estimates of our performance or recommendations by financial analysts and announcements by us or others regarding contracts, acquisitions, strategic partnership, joint ventures, or capital commitments.

6. *A potential scenario of rising inflation in India poses a challenge to our ability to adjust the prices of our products proportionally, thereby impacting our profit margins.*

In recent years, inflation rates in India have demonstrated volatility, a trend that may persist in the future. India has grappled with periods of elevated inflation, which, in turn, could lead to increased interest rates and heightened costs for our business, encompassing transportation, wages, raw materials, and other relevant expenses.

The fluctuating nature of inflation rates adds complexity to our cost estimation and control processes. Managing our costs becomes more challenging with heightened inflationary trends, potentially affecting our ability to accurately predict and control expenses. The consequence of such a scenario is that we may encounter difficulty passing on increased costs entirely or partially to our customers, thus adversely impacting our business and financial health.

Specifically, the challenge lies in the potential inability to offset cost increases with corresponding price adjustments for our products. This inability to align costs and prices may adversely affect our overall business, operational results, cash flows, and financial standing. It is noteworthy that the government has previously taken economic measures to counter high inflation rates. However, the effectiveness of such measures in the future remains uncertain.

Furthermore, uncertainties surround the trajectory of Indian inflation levels, and there is no guarantee that measures to curb inflation will be consistently effective. The potential exacerbation of inflation in the future adds an element of unpredictability to our operating environment, emphasizing the need for prudent risk management practices.

7. *You will not be able to sell immediately on Indian Stock Exchanges any of the Equity Shares you purchase in the Issue until the Issue receives appropriate trading permissions.*

The Equity Shares will be listed on the Stock Exchange. Pursuant to Indian regulations, certain actions must be completed before the Equity Shares can be listed and trading on stock exchange. We cannot assure you that the Equity Shares will be credited to investor's demat accounts, or that trading in the Equity Shares will commence, within the time periods specified in this Red Herring Prospectus. Any failure or delay in obtaining the approval would restrict your ability to dispose of the Equity Shares. In accordance with section 40 of the Companies Act, if the permission of listing the Equity Shares is denied by the stock exchanges, we are required to refund all monies collected to investors.

8. *Our operations are subject to environmental, health and safety laws and regulations.*

Our operations are subject to various Central and State environmental laws and regulations relating to the control of pollution in the various locations in India where we operate. In particular, the discharge or emission of chemicals, dust or other pollutants into the air, soil or water that exceed permitted levels and cause damage to others may give rise to liability to the Government and third parties, and may result in our incurring costs to remedy such discharge or emissions. There can be no assurance that compliance with such environmental laws and regulations will not result in a curtailment of operations, or a material increase in the costs of operations, or otherwise have a material adverse effect on the financial condition and results of our operations. Environmental laws and regulations in India have been increasing in stringency and it is possible that they will become significantly more stringent in the future. Stricter laws and regulations, or stricter interpretation of the existing laws and regulations, may impose new liabilities on us or result

in the need for additional investment in pollution control equipment, either of which could adversely affect our business, financial condition or prospects. While as of the date of this Red Herring Prospectus, we are not subject to any environmental legal proceedings, we may be impleaded in such legal proceedings in the course of our business. Such legal proceedings could divert management time and attention and consume financial resources or cause delays in the delivery of the order. No assurance can be given that we will be successful in all, or any, of such proceedings.

9. *There is no guarantee that the Equity Shares issued pursuant to the Issue will be listed on the Emerge Platform of National Stock Exchange of India Limited in a timely manner, or at all.*

In accordance with Indian law and practice, permission for listing and trading of the Equity Shares issued pursuant to the Issue will not be granted until after the Equity Shares have been issued and allotted. Approval for listing and trading will require all relevant documents authorizing the issuing of Equity Shares to be submitted. There could be a failure or delay in listing the Equity Shares on the Emerge Platform of National Stock Exchange of India Limited. Any failure or delay in obtaining the approval would restrict your ability to dispose of your Equity Shares.

10. *We are subject to risks arising from interest rate fluctuations, which could adversely impact our business, financial condition and operating results.*

Changes in interest rates could significantly affect our financial condition and results of operations. If the interest rates for future borrowings increase significantly, our cost of servicing such debt will increase. This may negatively impact our results of operations, planned capital expenditures and cash flows.

11. *Holders of Equity Shares may be restricted in their ability to exercise pre-emptive rights under Indian law and thereby suffer future dilution of their ownership position.*

A public company incorporated in India must offer its equity shareholders pre-emptive rights to subscribe and pay for a proportionate number of equity shares to maintain their existing ownership percentages prior to issuance of any new equity shares, unless the pre-emptive rights have been waived by the adoption of a special resolution by holders of three-fourths of the equity shares voting on such resolution. However, if the law of the jurisdiction that you are in does not permit the exercise of such pre-emptive rights without our filing an offering document or registration statement with the applicable authority in such jurisdiction, you will be unable to exercise such pre-emptive rights, unless we make such a filing. If we elect not to file a registration statement, the new securities may be issued to a custodian, who may sell the securities for your benefit. The value such custodian receives on the sale of any such securities and the related transaction costs cannot be predicted. To the extent that you are unable to exercise pre-emptive rights granted in respect of the Equity Shares, your proportional interests in our Company would be diluted.

12. *Foreign investors are subject to foreign investment restrictions under Indian law that limits our ability to attract foreign investors, which may adversely impact the market price of the Equity Shares.*

Under the foreign exchange regulations currently in force in India, transfer of shares between non-residents and residents are freely permitted (subject to certain exceptions) if they comply with the pricing guidelines and reporting requirements specified by the RBI. If the transfer of shares, which are sought to be transferred, is not in compliance with such pricing guidelines or reporting requirements or fall under any of the exceptions referred to above, then the prior approval of the RBI will be required. Additionally, shareholders who seek to convert the Rupee proceeds from a sale of shares in India into foreign currency and repatriate that foreign currency from India will require a no objection/tax clearance certificate from the income tax authority. There can be no assurance that any approval required from the RBI or any other government agency can be obtained on any particular terms or at all.

Illustration of the Book Building and Price Discovery Process: Bidders should note that this example is solely for illustrative purposes and is not specific to the Issue. Bidders can bid at any price within the Price Band. For instance, assume a Price Band of ₹20 to ₹ 24 per share, Issue size of 3,000 Equity Shares and receipt of five Bids from Bidders, details of which are shown in the table below. The illustrative book given below shows the demand for the Equity Shares of the Issuer at various prices and is collated from Bids received from various investors.

Bid Quantity	Bid Amount (₹)	Cumulative Quantity	Subscription
500	24	500	16.67%
1,000	23	1,500	50.00%
1,500	22	3,000	100.00%
2,000	21	5,000	166.67%
2,500	20	7,500	250.00%

The price discovery is a function of demand at various prices. The highest price at which the Issuer is able to Issue the desired number of Equity Shares is the price at which the book cuts off, i.e., ₹ 22.00 in the above example. The Company in consultation with the BRLM, may finalise the Issue Price at or below such Cut-Off Price, i.e., at or below ₹ 22.00. Basis of Estimation and Key Assumptions for working capital projections made by Company:

Holding Period	(Audited)				(Projected)	
	31-Mar-22	31-Mar-23	31-Mar-24	30-Jun-24	31-Mar-25	31-Mar-26
Inventory (in days)	56	49	62	65	60	60
Trade Receivable (in days)	36	31	41	53	43	45
Trade Payable (in days)	47	53	52	41	31	23

Notes:

1. Holding period level (in days) of Trade Receivables is calculated by dividing trade receivables by revenue from operations multiplied by number of days in the year/period.
2. Holding period level (in days) of Inventory is calculated by dividing Total inventory by sum of Cost of materials consumed, Purchases of stock-in-trade and Changes in inventory multiplied by number of days in the year/period.
3. Holding period level (in days) of Trade Payables is calculated by dividing trade payables by purchase of raw material multiplied by number of days in the year/period.

Justification for holding period:

Inventory	<p>The Inventories includes Raw material i.e. HDPE Granuels, PP Granuels, ZINC Ash, Sulphuric Acid; WIP; and Finished Goods. Notably, the inventory holding period was 56 days in FY 2021- 22 to 49 days in FY 2022-23, 62 days in 2023-24, and 65 days in June 30, 2024. The inventory level during to FY 2021-22 to 2023-24 is stable at around 45-65 days.</p> <p>Looking ahead, we anticipate maintaining a consistent level of 60 days for both FY 2024-25 and 2025-26 based on historical trend of last financial year i.e. FY 2023-24. Reason for high inventory days is Company need to store an adequate supply of inventory to ensure uninterrupted production and supply of our products. By having a sufficient inventory, we can meet the demand for our products and avoid any potential disruptions caused by any delay.</p>
Trade Receivable	<p>Over the past three financial years, we have observed our trade receivables holding days in the range of 35-45 days which represent credit period given by the Company to customers for settling their dues. In FY 2021-22, our trade receivables days were 36 days, 31 days in FY 2022-23, and 41 days in FY 2023-24. While, Trade receivable holding days for the period ended June 30, 2024 stood at 53 days.</p> <p>Looking ahead, we anticipate maintaining a level of 43-45 days in our trade receivable holding days i.e. 43 days in FY 2024-25 to 45 days in FY 2025-26. Above anticipated days are based on historical trend. By offering this flexibility, we expect to stimulate increased sales volume and foster stronger customer relationships.</p>
Trade Payable	<p>Trade payable holding days, which represent the number of days taken to settle outstanding balance of trade payables, has remained in the range of 45-55 days over the past three financial years. In FY 2021-22, our holding days stood at 47 days, followed by 53 days in FY 2022-23, and 52 days in FY 2023-24. Trade payable holding days for the period ended June 30, 2024 stood at 41 days.</p> <p>Company expects trade payable days to decrease to 31 days in FY 2024-25 to 23 days in FY 2025-26. The projected decrease in trade payables days is a strategic decision driven by our objectives to secure timely delivery and foster strong relationships with our suppliers. By reducing the time it takes to settle</p>

	our payables, we aim to negotiate more favorable terms and conditions with our suppliers, enabling us to access competitive pricing for the goods and uninterrupted supply of Raw material.

As our subsidiary undertakes the development of this project, prudent consideration is given to the working capital requirement. This meticulous financial planning aims to optimize the combination of trade receivable days, trade payable days, and inventory levels, ensuring efficient production management and compliance with legal and financial regulations.

Our company requires working capital requirement on standalone basis to achieve expected targets by providing goods on credit to customers, to avail benefits of better pricing and discounts from vendors and to maintain sufficient level of inventory to ensure uninterrupted supply which will ultimately help better production yields and better profitability margins. Therefore, our Company would require funding for its working capital requirements in the FY 2025-26.

	31-Mar-24	30-Jun-24	31-Mar-25	31-Mar-26
Inventory (in days)	N.A.	N.A.	N.A.	60

Yara Green Energy Pvt Ltd (YGEPL) is a newly incorporated subsidiary of the Issuer Company which is promoted by promoters i.e. Yashpal Singh Yadav and Anya Agro & Fertilizers Private Limited. YGEPL is primarily focusing on the bioenergy projects to begin with Biomass pellets. The working capital requirement will arise once the plant is fully functional. The issuer company estimates to complete the commencement of plant by the end of October 2025 based on management estimates. Thereby, working capital requirement of ₹ 175.00 Lakhs will be funded from Net Proceeds.

Justification for holding period:

Inventory	The biofuel pellet plant relies on husk as its primary raw material, which varies with the crop season. To effectively manage this fluctuation, the management has estimated that the total inventory level should cover 60 days. This estimate includes not only the raw material but also the finished goods, as well as stores, spare parts, and consumables.
Trade Receivable	The management of the company proposes maintaining an accounts receivable period of 30 days, which aligns with industry norms.
Trade Payable	Since the raw material is procured directly from farmers and payments are typically made within a short timeframe, the management of the company has estimated a creditors holding period of 6 days.

Apart from above there are other working capital requirements such as Cash and Cash Equivalents, Other financial assets and current Assets, Other Financial and Current Liabilities, and short term provisions. Details of which are given below.

Basis of Estimation and Key Assumptions for working capital projections made by Company:

Holding Period	(Audited)				(Projected)	
	31-Mar-22	31-Mar-23	31-Mar-24	30-Jun-24	31-Mar-25	31-Mar-26
Inventory (in days)	803	254	557	570	241	242
Trade Receivable (in days)	236	131	193	199	141	142
Trade Payable (in days)	121	54	34	36	45	46

Notes:

1. Holding period level (in days) of Trade Receivables is calculated by dividing trade receivables by revenue from operations multiplied by number of days in the year/period.
2. Holding period level (in days) of Inventory is calculated by dividing Total inventory by sum of Cost of materials consumed, Purchases of stock-in-trade and Changes in inventory multiplied by number of days in the year/period.
3. Holding period level (in days) of Trade Payables is calculated by dividing trade payables by purchase of raw material multiplied by number of days in the year/period.

Arawali is a manufacturer of Single Super Phosphate (SSP) Fertilizer. In SSP Fertilizers industry, Trade receivable holding period tends to be at higher side of 130-240 days as the product is directly linked with the Government subsidy due to which the working capital requirement of the subsidiary tends to increase. Further, after additional capital expenditure of ₹ 320.00 Lakhs for SSP Plant, the working capital requirement for the subsidiary will eventually lead to an increasing working capital requirement.

Justification for holding period:

Inventory	The Inventories includes Raw material of Rock Phosphate, Sulphuric Acid, WIP and Finished Goods. Notably, the inventory holding period has fluctuated significantly from 803 days in FY 2021-22 to 254 days in FY 2022-23 to 557
------------------	--

	<p>days in FY 2023-24 and 570 days for the period ended June 30, 2024 due to the higher inventory of Raw material of Rock Phosphate and Zinc Sulphate.</p> <p>We expect our inventory holding period for the Financial Year 2023-24 & 2024-25 will be 241 and 242 days improved as compared with the March 2024 inventory levels of 570 days. The projected inventory holding period is decreased over the previous year to maintain better fund flow and aligns with our business growth and due to increase in business operations and expansion of capacity inventories in absolute value is proposed to increase over the previous year.</p>
Trade Receivables	<p>The holding levels of trade receivables were 236 days in FY 2021-22, 131 days in FY 2022-23, 193 days in FY 2023-24, 199 days in June 30, 2024. The trade receivable level increased slightly over the previous years. The Trade Receivable level is high in our business (SSP fertilizer industry) due to Government NPS subsidy. However, the company is planning to improve the trade receivable realization period the trade receivable are proposed at to 141 and 143 days in F.Y. 2023-24 and FY 2024-25.</p>
Trade Payables	<p>The holding levels of trade payable were 121 days in FY 2021-22, 54 days in FY 2022-23, 34 days in FY 2023-24, 36 days in June 30, 2024 and they are expected to increase to 45 and 46 days by F.Y. 2024-25 and FY 2025-26, as company is planning to purchase raw material in bulk at attractive prices with comparatively higher credit period.</p>

Apart from above there are other working capital requirements such as Cash and Cash Equivalents, Other financial assets and current Assets, other Financial and Current Liabilities, and short term provisions. Details of which are given below.

Cash and Cash Equivalents	<p>Cash and cash equivalents include balances in current account with scheduled bank and cash in hand. Cash and Cash Equivalent balance is estimated based on previous year outstanding amount and for expected Business requirement of company.</p>
Other financial assets and current Assets	<p>Other financial assets and current Assets mainly include loan & advances, Advances to creditors, balance with government authorities, accrued interest and advance given. Other Current Assets is for expected Business requirement of company.</p>
Other Financial and Current Liabilities	<p>Other Financial and Current Liabilities mainly include Advance from customers, statutory liabilities, Security deposits, expenses payable. Other current liabilities is estimated based on previous year outstanding amount and for expected Business requirement of company.</p>
Short-term provisions	<p>Short-term provisions mainly include Provision for income tax and Gratuity etc. Short-term provisions is estimated based on previous year outstanding amount and for expected Business requirement of company.</p>

SECTION VIII – ABOUT THE COMPANY

INDUSTRY OVERVIEW

The information in this section has been extracted from various websites and publicly available documents from various industry sources. The data may have been re-classified by us for the purpose of presentation. Neither we nor any other person connected with the Issue have independently verified this information provided in this section. Industry sources and publications may also base their information on estimates, projection forecasts and assumptions that may prove to be incorrect. Accordingly, investors should not place undue reliance on information.

GLOBAL ECONOMIC OVERVIEW

Global growth is forecast to slow from 3.5 percent in 2022 to 3.0 percent in 2023 and 2.9 percent in 2024. For advanced economies, the expected slowdown is from 2.6 percent in 2022 to 1.5 percent in 2023 and 1.4 percent in 2024, amid stronger-than-expected US momentum but weaker-than-expected growth in the euro area. Emerging market and developing economies are projected to have growth modestly decline, from 4.1 percent in 2022 to 4.0 percent in both 2023 and 2024, with a downward revision of 0.1 percentage point in 2024, reflecting the property sector crisis in China. Forecasts for global growth over the medium term, at 3.1 percent, are at their lowest in decades, and prospects for countries to catch up to higher living standards are weak. Global inflation is forecast to decline steadily, from 8.7 percent in 2022 to 6.9 percent in 2023 and 5.8 percent in 2024. But the forecasts for 2023 and 2024 are revised up by 0.1 percentage point and 0.6 percentage point, respectively, and inflation is not expected to return to target until 2025 in most cases.

Despite signs of economic resilience earlier this year and progress in reducing headline inflation, economic activity is still generally falling short of prepandemic projections, especially in emerging markets and developing economies. The strongest recovery among major economies has been in the United States, where GDP in 2023 is estimated to exceed its prepandemic path. In China, the pandemic-related slowdown in 2022 and the property sector crisis contribute to the larger output losses of about 4.2 percent, compared with prepandemic predictions. Other emerging markets and developing economies have seen even weaker recoveries, especially low-income countries, where output losses average more than 6.5 percent.

INFLATION

Global headline inflation has more than halved, from its peak of 11.6 percent in the second quarter of 2022 to 5.3 percent in the second quarter of 2023. About four-fifths of the gap between the 2022 peak and the prepandemic annual average level of 3.5 percent has closed. Among major economies, headline inflation in the second quarter of 2023 ranged from –0.1 percent in China to 2.8 percent in the euro area and 2.7 percent in the United States. A fall in energy prices and—to a lesser extent—in food prices has driven the decline in headline inflation. Notwithstanding a rebound in July, crude oil prices have declined during 2023 and are well below their June 2022 peak, on the back of lower global demand partly driven by tighter global monetary policy affecting activity. Natural gas prices also remain well below their 2022 peak, reflecting ample storage and supplies from Norway and northern Africa. Food prices have declined modestly in 2023, with lower demand offset by supply reductions, notably those resulting from Russia’s withdrawal from the Black Sea Grain Initiative in July, which reduced the supply of wheat to the global market. The normalization of supply chains has further contributed to the decline in headline inflation in most countries.

GROWTH IN EMERGING ECONOMIES

Growth in emerging and developing Asia is projected to rise from 4.5 percent in 2022 to 5.2 percent in 2023, then to decline to 4.8 percent in 2024, with downward revisions of 0.1 percentage point and 0.2 percentage point for 2023 and 2024, respectively, compared with July projections.

Growth in China: - The revision reflects a lower forecast for China, which is revised downward by 0.2 percentage point for 2023 and by 0.3 percentage point for 2024 to growth of 5.0 percent in 2023 and 4.2 percent in 2024. With the property market crisis in that country, lower investment is the main contributor to the revision.

Growth in India: - Growth in India is projected to remain strong, at 6.3 percent in both 2023 and 2024, with an upward revision of 0.2 percentage point for 2023, reflecting stronger-than-expected consumption during April-June.

INDIAN ECONOMIC OVERVIEW

According to the report by the World Bank, India was one of the fastest growing major economies in FY 2022-23 at 7.2%.

India's growth rate was the second highest among G20 countries and almost twice the average for emerging market economies. This resilience was underpinned by robust domestic demand, strong public infrastructure investment and a strengthening financial sector.

Robust economic expansion during the initial quarter of the fiscal year 2023 enabled India to surpass the United Kingdom, securing its position as the fifth-largest global economy, having successfully rebounded from the adverse effects of the COVID-19 pandemic. According to the World Bank's Industrial Development Update, it is expected that the global headwinds will continue to persist and intensify due to high global interest rates, geopolitical tensions, and sluggish global demand. In this context, the World Bank forecasts India's GDP growth for FY 2023-24 to be 6.3%.

INDIAN ECONOMIC GROWTH DRIVERS

According to Economic Survey 2022-23, India's economic growth in FY23 has been principally led by private consumption and capital formation and they have helped generate employment as seen in the declining urban unemployment rate and in the faster net registration in Employee Provident Fund.

The Survey identifies various positive factors contributing to India's growth prospects:

- (i) **Limited global fallout from Covid-19 surge in China:** The world has experienced limited health and economic consequences from the recent surge in Covid-19 infections in China. This has allowed for the continued normalization of global supply chains, benefitting India's economic outlook.
- (ii) **Inflationary impulses from China's reopening:** The world has experienced limited health and economic consequences from the recent surge in Covid-19 infections in China. This has allowed for the continued normalization of global supply chains, benefitting India's economic outlook.
- (iii) **Recessionary tendencies in major advanced economies:** Economic downturns in major Advanced Economies (AEs) have prompted a cessation of monetary tightening, leading to an influx of capital flows into India. This is facilitated by India's stable domestic inflation rate, which remains below 6%.
- (iv) **Enhanced Private Sector Investment:** These favorable conditions have sparked an improvement in business sentiment and investment sentiment, providing further impetus to private sector investment.

The Survey reports robust credit growth to the Micro, Small, and Medium Enterprises (MSME) sector, averaging over 30.6% during the period from January to November 2022. This impressive growth is underpinned by the extended Emergency Credit Linked Guarantee Scheme (ECLGS) initiated by the Union government, which has supported the financial needs of small and medium-sized enterprises.

Another substantial contributor to India's economic growth in FY23 has been the significant increase in the capital expenditure (Capex) of the central government. The Capex rose by an impressive 63.4% during the first eight months of the fiscal year. This uptick in government spending has acted as a catalyst for private sector Capex since the January-March quarter of 2022, effectively stimulating economic activity.

INDIAN INDUSTRIAL OUTPUT

During the fiscal year 2022-23 (FY23), India's industrial production demonstrated remarkable resilience, primarily fueled by robust domestic demand. The availability of bank credit, including significant support to Micro, Small, and Medium Enterprises (MSMEs) through the Emergency Credit Line Guarantee Scheme (ECLGS), played a crucial role in sustaining this growth trend. While foreign direct investment (FDI) in the manufacturing sector experienced a temporary slowdown in the first half of FY23 due to global uncertainties, India's structural reforms and business-friendly environment kept it an attractive FDI destination. Falling international commodity prices alleviated input cost pressures, supporting healthy profit margins. Moreover, increasing capacity utilization in the manufacturing sector is encouraging new investments aimed at expanding production capabilities. Government initiatives like the Production-Linked Incentive (PLI) schemes are set to further boost manufacturing capacity, exports, and job creation. However, challenges such as a potential global economic slowdown, fluctuating commodity prices, and supply chain disruptions loom on the horizon. Despite these uncertainties, the Indian industrial output is expected to maintain a steady growth trajectory, driven by its resilient domestic demand.

MARKET SIZE

In the financial year 2022, India's total economic output, known as the nominal Gross Domestic Product (GDP) at current market prices, is estimated to be around US\$ 3.31 trillion (equivalent to approximately Rs. 272.41 trillion). Furthermore, during the third quarter of the fiscal year 2022-23, the nominal GDP at current market prices reached US\$ 874.84 billion (about Rs. 71.82 trillion). This represents a noteworthy growth of 10.4% when compared to the figures from the previous fiscal year, which stood at US\$ 792.3 billion (approximately Rs. 65.05 trillion) in 2021-22.

India has also gained prominence in the global tech industry, boasting a remarkable 115 unicorns with a combined valuation exceeding US\$ 350 billion as of February 2023. This achievement places India as the world's third-largest hub for such high-value startups.

Moreover, the Indian government is actively emphasizing the adoption of renewable energy sources, with a goal of sourcing 40% of its energy needs from non-fossil fuel sources by 2030. Additionally, India is firmly committed to the ambitious objective of achieving Net Zero Emissions by the year 2070, and this commitment is underpinned by a comprehensive strategy known as 'Panchamrit.' In recognition of its efforts and potential in the renewable energy sector, India holds the impressive rank of third place in the Renewable Energy Country Attractive Index.

Top of Form

According to the McKinsey Global Institute, India needs to boost its rate of employment growth and create 90 million non-farm jobs between 2023 and 2030 in order to increase productivity and economic growth. The net employment rate needs to grow by 1.5% per annum from 2023 to 2030 to achieve 8-8.5% GDP growth between 2023 and 2030. India's current account deficit (CAD), primarily driven by an increase in the trade deficit, stood at US\$ 1.3 billion, 0.2% of GDP in the fourth quarter of FY23.

India's Gross Domestic Production

RECENT DEVELOPMENTS

With an improvement in the economic scenario and the Indian economy recovering from the Covid-19 pandemic shock, several investments and developments have been made across various sectors of the economy. In view of this, there have been some developments that have taken place in the recent past. Some of them are mentioned below:

1. As of January 6, 2023, India's foreign exchange reserves stood at US\$ 561,583 million.
2. Merchandise exports in March 2023 stood at US\$ 38.38 billion, with total merchandise export of US\$ 447.46 billion during the period of April-March 2023. The overall exports (merchandise and service exports) in 2022-23 was estimated at US\$ 770.18, exhibiting a growth of 13.84%.
3. PMI Services remained comfortably in the expansionary zone at 57.8 in the month of June 2023.
4. In June 2023, the gross Goods and Services Tax (GST) revenue collection stood at US\$ 19.63 billion (Rs. 1,61,497 crore), of which CGST is US\$ 3.77 billion (Rs. 31,013 crore), SGST is US\$ 4.65 billion (Rs. 38,292 crore), IGST is US\$ 9.76 billion (Rs. 80,292 crore).
5. In FY23, the Foreign Portfolio Investment (FPI) outflows stood at US\$ 14.81 billion (Rs. 1.21 trillion). As per depository data, Foreign Portfolio Investors (FPIs) invested Rs. 22,000 crore (US\$ 2.67 billion) in India during the first week of July 2023.

GOVERNMENT INITIATIVES

Over the years, the Indian government has introduced many initiatives to strengthen the nation's economy. The Indian government has been effective in developing policies and programmes that are not only beneficial for citizens to improve their financial stability but also for the overall growth of the economy. Over recent decades, India's rapid economic growth has led to a substantial increase in its demand for exports. Besides this, a number of the government's flagship programmes, including Make in India, Start-up India, Digital India, the Smart City Mission, and the Atal Mission for Rejuvenation and Urban Transformation, is aimed at creating immense opportunities in India. In this regard, some of the initiatives taken by the government to improve the economic condition of the country are mentioned below:

1. In order to enhance India's manufacturing capabilities by increasing investment and production in the sector, the government of India has introduced the Production Linked Incentive Scheme (PLI) for Pharmaceuticals.
2. Prime Minister's Development Initiative for North-East Region (PM-DevINE) was announced in the Union Budget 2022-23 with a financial outlay of US\$ 182.35 million (Rs. 1,500 crore).
3. Prime Minister Mr Narendra Modi has inaugurated a new food security scheme for providing free food grains to Antodaya Ann Yojna (AAY) & Primary Household (PHH) beneficiaries, called Pradhan Mantri Garib Kalyan Ann Yojana (PMGKAY) from 1st January 2023.

-
4. In the Union Budget of 2022-23, the government has allocated Rs. 44,720 crore (US\$ 5.98 billion) to Bharat Sanchar Nigam Limited (BSNL) for capital investments in the 4G spectrum.
 5. Minister for Finance & Corporate Affairs Ms Nirmala Sitharaman announced in the Union Budget of 2022-23 that the Reserve Bank of India (RBI) would issue Digital Rupee using blockchain and other technologies.
 6. In the Union Budget of 2022-23, Railway got an investment of Rs. 2.38 trillion (US\$ 31.88 billion) and over 400 new high-speed trains were announced. The concept of "One Station, One Product" was also introduced.
 7. India is expected to attract investment of around US\$ 100 billion in developing the oil and gas infrastructure during 2019-23
 8. The Government of India is expected to increase public health spending to 2.5% of the GDP by 2025.

ROAD AHEAD

During the second quarter of the fiscal year 2023, India managed to sustain the growth momentum it had achieved in the preceding quarter. High-frequency indicators (HFIs) showed strong performance in the months of July and August 2022. This performance reflects India's relatively favorable position in the international trade sector, indicating a positive outlook for economic growth and increased job opportunities. Notably, India ranked fifth in terms of foreign direct investment inflows among both developed and developing nations in the first quarter of 2022.

The economic narrative of India in the first half of the current fiscal year underscores the government's steadfast commitment to boosting capital expenditure, which, by August 2022 in FY23, had surged by 46.8% compared to the same period the previous year. The shift in the ratio of revenue expenditure to capital outlay, from 6.4 in the previous year to 4.5 in the current year, signifies a clear move toward more prudent and high-quality spending. Enhanced tax compliance increased corporate profitability, and a general uptick in economic activity all contributed to this upswing in capital expenditure.

Despite the challenges posed by the global pandemic, India's economic resilience shone through, with merchandise exports growing by 8.39% year-on-year and service exports by an impressive 29.82% up to April 2023. Port congestion issues are being resolved, and supply networks are gradually returning to normal. The impact of these positive developments is already evident in the reduction of the Consumer Price Index for Combined (CPI-C) inflation, which decreased from 7.01% in June 2022 to 4.81% in June 2023 (Provisional). A combination of proactive government actions, a flexible monetary policy, and the easing of global commodity prices and supply chain disruptions suggests a diminishing trend in inflationary pressures throughout India.

INDIAN PLASTIC PACKAGING MARKET

The India Plastic Packaging Market size is expected to grow from USD 21.12 billion in 2023 to USD 24.59 billion by 2028, at a CAGR of 3.09% during the forecast period (2023-2028).

The growing preference for convenience and portability packaging continues to be a significant driver of rigid plastics in food packaging. Also, the need for comfort, portability, and tensile strength remains crucial for rigid plastics usage in the cosmetics & toiletries industry.

- Flexible packaging accounts for more than 60% of the market and is mainly used for food, according to the Flexible Packaging Association. Since flexible packaging can offer solutions to various packaging problems, the demand for flexible packaging is expanding. According to IBEF, India's grocery and food market are the sixth-largest in the world, with 70% of sales coming from retail. Also, food processing accounted for 32% of India's total food market and was rated fifth in production, consumption, and export. It would propel the demand for flexible plastic in packaging.
- The need for e-commerce packaging is developing in India due to the country's expanding economy, growing middle class, changing lifestyles, and increasing population. The India Brand Equity Foundation predicts that by 2026, the country's e-commerce market will reach USD 200 billion. The boom in internet and smartphone use is also driving the majority of the industry's growth.
- Also, in July 2021, DRDO collaborated with Acharya Nagarjuna University, and Ecolastic Private Limited introduced environmentally-friendly packaging products made from natural and plant-based food-grade materials to eliminate single-use plastic. These bags are sustainable, cost-effective, and ocean-safe alternatives to single-use plastics, unlike traditional polyethylene bags created from petrochemicals, which are hazardous to the environment and take years to degrade.

-
- According to Union Environment Minister Prakash Javadekar, India is also making every effort to secure a comprehensive ban on single-use plastic by 2022, as Prime Minister Narendra Modi envisioned. The nation started the Plastic Hackathon 2021 campaign to raise awareness of single-use plastics in June 2021, anticipating it hindering the market growth.
 - Due to the COVID-19 outbreak, the nutritional drinks and healthy food demand increased exponentially. The majority of these products are packaged with single-use plastic. The orders were so huge globally that the manufacturers and packaging companies in the field expanded their facilities, which most governments supported. Further, the Russia-Ukraine war also impacted the overall packaging ecosystem.

INDIA PLASTIC PACKAGING MARKET TRENDS

This section covers the major market trends shaping the India Plastic Packaging Market according to our research experts:

Growing E-commerce Industry is Expected to Drive Growth

- Over the past years, the e-commerce industry in India is growing significantly. According to projections, the Indian e-commerce market will increase to USD 200 billion by 2026 from USD 38.5 billion in 2017. Increased internet and smartphone use and the nation's continuing digital transformation are anticipated to fuel this rise. The e-commerce sector briefly fell after India closed down in March 2020, but things started to pick up after the uplifting of restrictions. The number of online orders placed through marketplaces and direct brand websites increased by 130% overall.
- Also, amid the e-commerce boom, one of the fastest-growing sectors is the Indian packaging business, which is expanding rapidly. The Indian Institute of Packaging (IIP) estimates that India's per-person annual packaging usage grew by 200% in the last ten years, from 4.3 kg to 8.6 kg.
- Additionally, during the pandemic, the Indian e-commerce industry witnessed significant growth in online order volume due to the restrictions imposed on the people movement and the shutdown of physical stores. For instance, according to Flipkart, the Indian e-retail market saw a 25% growth in FY21 despite the two-month national lockdown and multiple prolonged disruptions in regional pockets over the year.
- Moreover, recycling became a significant factor for businesses that make perfume, skincare, and cosmetics. An agreement to produce and market polyethylene (PE) film solutions derived from post-consumer recycled (PCR) plastics in India was signed in February 2021 by Dow Packaging and Specialty Plastics (P&SP) and Lucro Plastecycle, an Indian recycling company. This agreement expands the Asia-Pacific region's overall circularity portfolio and provides a closed-loop packaging solution to assist India in creating a circular economy.
- Furthermore, people across the country are increasingly buying online groceries, food items, and daily essentials while also purchasing merchandise online. Such trends are anticipated to boost the demand for recycled plastic, as the e-commerce and retail industry is one of the country's significant flexible packaging solution adopters. E-commerce players such as Amazon and sellers across the country adopted recyclable plastic packaging, which includes recycled plastic bags. Also, the increasing number of online shoppers in India is anticipated to support market growth. For instance, according to The Hindu, the number of online shoppers in India increased from 110 million in 2018 to 190 million in 2021.

FOOD INDUSTRY TO REGISTER A SIGNIFICANT GROWTH

- The food segment is one of the most significant users of plastics. The demand for rigid plastic packaging in the food industry is high, as it is increasingly replacing traditional materials, such as paperboard, metals, and glass, owing to beneficial properties, such as lightweight and reduced cost. Also, Phantom Plastics' scientific study reported that plastics' global carbon dioxide emissions are 0.23 GT/year, far lower than other materials such as glass, metal, paper, and ceramic.
- Additionally, as part of the "Make in India" initiative, the Indian government prioritizes and promotes investment in the food processing sector. The government created 134 cold chain projects and 18 mega food parks to enhance the food processing supply chain. These measures will benefit businesses that process food. The food processing sector is also on a strong development trajectory due to recent government measures, such as INR 10,000 crore (USD 1.35 billion) program launched to boost the industry, eventually enhancing the demand for flexible plastic packaging in the country.
- The market for small-sized plastic containers is anticipated to witness growth, with the sales of dairy products, jams, etc. In recent years the sales of yogurt have seen a slump. Hence, many manufacturers are focusing on vertical and horizontal integration to regain demand.

- For instance, in August 2022, Manjushree Technopack entered an agreement to acquire the business operations and manufacturing facilities of Hitesh Plastics. The acquisition will allow Manjushree to enter the specialized caps and closures market segment. It will also help to strengthen its position as an end-to-end integrated rigid plastic packaging player. They will add two new plants in Jalgaon, Maharashtra, to Manjushree's existing 21 plants across India. The company's consolidated manufacturing capacity will exceed 2,00,000 MT per annum.
- Brand owners are increasingly looking for packaging converters to design secondary packaging solutions that can prevent shipping-related damage. Nowadays, packaging airbags are used for beverages packaged in glass bottles (the most fragile items). Airpack provides this solution to various e-commerce companies. All the above factors are anticipated to boost demand for plastic packaging in India. Also, online retail is growing significantly, which may attribute to the scale of the e-commerce sector. It is a favorable government policy to allow 100% FDI into e-commerce and an expanding base of digital consumers in India. Also, in 2020, India's online retail market reached USD 60 billion. Since 2015, it was to be around USD 13 billion, showing growth. By 2022, the online retail industry is projected to reach USD 73 billion.

INDIA PLASTIC PACKAGING RECENT DEVELOPMENT

- December 2022: India launched the Plastics Pact, the first-of-its-kind initiative in Asia, to ensure the effective recycling of plastic packaging with the support of stakeholders. By 2030, this pact aims for 100% plastic packaging to be reusable or recyclable in India.
- August 2022: Supple Pack, previously known as National Vinyl industries, was listed among India's top 10 packaging companies by Industry Outlook. It manufactures bottles/cans ranging from 5 ml to 75 ml through the Extrusion Blow Moulding Process. Also, the company is one of the leading companies in manufacturing a wide range of caps and closures, including flip-top caps manufactured using high cavitation molds that come with full hot-runner and in-mold closing systems. The company includes a strong foothold in manufacturing retortable PP bottles. 'To complement its high-volume production of caps and closures, the company plans to venture into the single-stage stretch blowing technology to help it capture the high volume market of pharma bottles.'

FERTILIZER INDUSTRY

Fertilizers are composed of wide variety of nutrients include the following:

- The primary nutrients are nitrogen (N), phosphorous (P) and potassium (K), which are required in large quantities and are normally supplied through chemical fertilizers;
- Secondary nutrients are required in smaller quantities vis-a-vis the primary nutrients and include calcium, magnesium and Sulphur; and
- Micronutrients are groups of nutrients that are essential for plant growth, though plants require them in smaller quantities. These include iron, zinc, manganese, copper, boron, molybdenum and chlorine. The most extensively used micronutrient in India is zinc sulphate.

Different nutrients impart different characteristics to the fertilizers

Nitrogenous fertilizers impart color to plants and increase their vegetative growth. Urea and calcium ammonium nitrate (CAN) are the main nitrogenous fertilizers and are expressed as 46-0-0 and 25-0-0, respectively.

Phosphatic fertilizers are used to strengthen the roots in a plant. Single super phosphate (SSP) is the main phosphatic fertilizer and is expressed as 0-16-0.

Potassic fertilizers are essential for crops as they build their resistance to drought and diseases. In India, they are mainly combined with N and P₂O₅ (phosphate) to produce complex fertilizers. Muriate of potash (MoP) is the main potassic fertiliser and contains 60% potassium.

Phosphatic fertilizers have seen demand grow on account of increasing awareness about their benefits

Phosphorus plays a vital role in photosynthesis, functioning in the capture and transfer of energy into chemical bonds. New, rapidly growing plant meristematic tissues have a high concentration of P. The genetic materials, DNA and RNA, are built around a backbone of P atoms, and P plays a major role in the metabolism of sugars and starches, all critical to cell division and growth processes.

Key products as well as their usage and efficacy

➤ **Single Super Phosphate (SSP)**

SSP is cheaper compared to other Phosphatic fertilizers. It is more suited for crops like oil seeds, pulses, horticulture, vegetables, sugarcane, paddy etc. Single Super Phosphate (SSP) fertilizer is mainly used for improving root growth and chlorophyll synthesis and thus improves product quality. SSP helps in improving root growth and development which is most important for uptake of plant nutrient and water.

➤ **Mono-Ammonium Phosphate (MAP)**

Ammonia gas is combined with phosphoric acid, granulated, dried and screened to produce MAP. One of the major cropping fertilizers as a source of phosphorus and nitrogen. The low level of nitrogen makes it useful as a 'starter' fertiliser and as there is no free ammonia, the risk of affecting germinating seeds is minimal. It's watersoluble and dissolves rapidly in adequately moist soil. Upon dissolution, the two basic components of the fertilizer separate again to release ammonium and phosphate both of which plants rely on for healthy, sustained growth.

➤ **Muriate of Potash (MOP)**

Occurs as a natural salt and after processing to cleanse out unwanted salts (especially common salt), it is usually compacted into 'chips' and screened to meet size specifications. MOP is used extensively for fertilizing pastures, sugar cane, fruit trees, vegetables, and other field crops. It plays a vital role in the production of proteins and sugars. It also protects against draught by maintaining plants water content which in turn is a benefit for photosynthesis as leaves maintain their shape and vigor.

➤ **Sulphate of Ammonia (SOA)**

SOA is often manufactured by the direct mixing of sulfuric acid and ammonia, or as a by-product of refinery or caprolactum manufacture. SOA releases nitrogen to the soil directly as ammonium, which is converted by bacteria to nitrate nitrogen. This process is favored by conditions conducive to microbial activity, such as warm temperatures, moisture and organic matter.

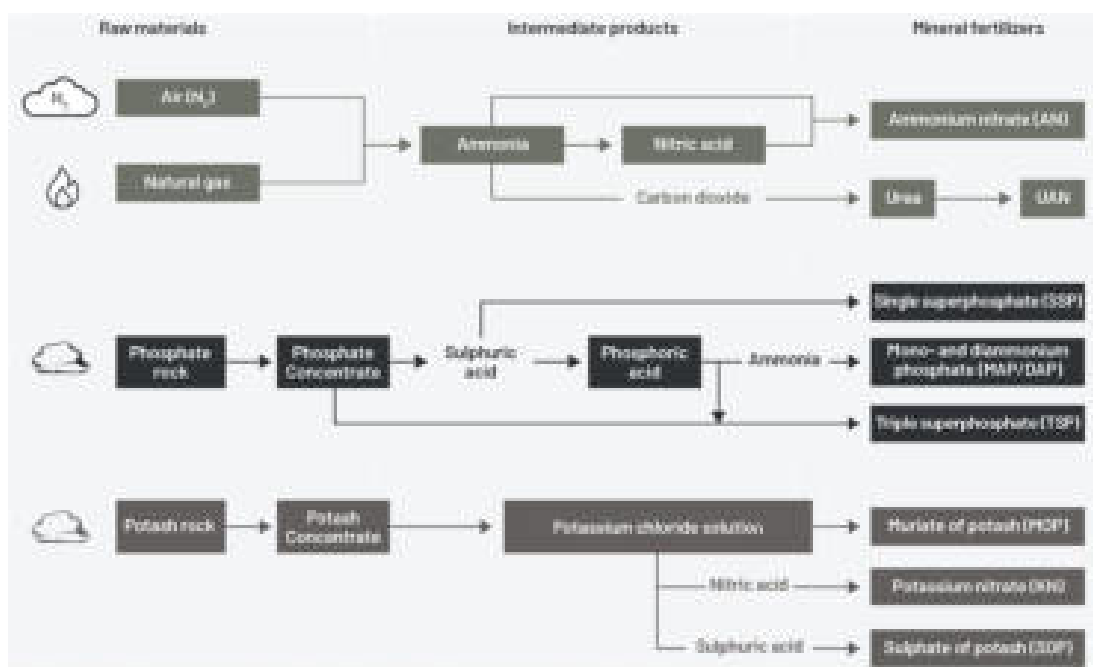

➤ **Sulphate of Potash (SOP)**

Potassium Sulphate is manufactured in either of the following ways – i) Mined and processed to clean away unwanted salts and ii) Muriate of Potash is reacted with Sulfuric Acid. Potassium sulphate (SOP) can be a more expensive source of potassium than MOP and so its uses are often restricted to three main areas: (i) where soil or irrigation water salt levels are high and MOP is undesirable; (ii) where chloride sensitive crops are being grown; for example, berries and vines; (iii) where high chloride levels occur in irrigation water.

➤ **Di-Ammonium Phosphate (DAP)**

One of the major cropping fertilizers as a source of both phosphorus and nitrogen. The high phosphorus content makes it a true high analysis fertiliser. It is used on a range of crops in broad-acre farming, cereals, sugar cane, fodder crops and also in horticultural crops; for example, vegetables and tree crops. It's highly soluble and thus dissolves quickly in soil to release plant-available phosphate and ammonium. When applied as plant food, it temporarily increases the soil pH, but over a long term the treated ground becomes more acidic than before upon nitrification of the ammonium.

PRODUCTION OF MAIN FERTILIZER PRODUCTS.

Introduction of Industry

Agriculture plays a vital role in India's economy. With its solid forward linkages, the agriculture and allied activities sector significantly contributed to the country's overall growth and development by ensuring food security. The Indian agriculture sector has been growing at an average annual growth rate of 4.6 per cent during the last six years. It grew by 3.0 per cent in 2021-22 compared to 3.3 per cent in 2020-21. Food grain production has increased from 308.65 million tonnes in January 2022 to 315.72 million tonnes in December 2022 (as per 4th advance estimates) which is the highest ever food grain production.

The details of 'Total Food grains, Oilseeds and Pulses since 2014-15 to 2021-22 are given as under:

Source: Economic Survey, 2022-23, Ministry of Finance.

Fertilizer, water and seeds are vital inputs for higher agricultural production. Increasing use of fertilizers has contributed significantly in enhancing food grain production and bringing self-sufficiency in food grain production in the country. India

is the second largest consumer and third largest producer of finished fertilizers in the world. India is net importer of fertilizers, both finished products as well as raw materials.

Position of Production & Import of fertilizers:

Amongst the major fertilizers, against the total requirement, around 75% of Urea, 40% of DAP, and 85% of NPKS are produced in the country by PSUs and private companies. The rest is imported on account of Government of India (as in case of Urea) & by the companies in case of P&K (under Open General Licenses) to bridge the gap between requirement & production of fertilizers. The sector-wise production of Urea, DAP and Complex fertilizers during 2021-22 and 2022-23 (upto December 2022) are given below:

(Fig. in LMT)

Urea Subsidy Scheme

As far as Urea is concerned, Urea is sold at statutorily notified uniform MRP. At present the Urea is being provided to the farmers at a statutorily notified Maximum Retail Price (MRP) of Rs.242 per 45 kg bag of urea (exclusive of charges towards neem coating and taxes as applicable). The difference between the delivered cost of urea at farm gate and net market realization by the Urea units is given as subsidy to the Urea manufacturer/ importer by the Government of India. Accordingly, all farmers are being supplied urea at the subsidized rates. The said MRP has been notified by Department of Agriculture and Farmers Welfare vide Gazette notification no. 3-12/2017-Fert. Law dated 1st March 2018. Since then there is no change in the MRP of Urea.

Nutrient Based Subsidy Scheme:

Subsidy rates of P&K fertilizers are under the Nutrient Based Subsidy (NBS) scheme which were increased on 20.5.2021 & 13.10.2021 (giving special compensation on DAP and 3 most commonly used NPK fertilizers) for the year 2021-22 and then further increased substantially for Kharif-2022 (applicable from 01.4.2022 to 30.9.2022), so that these fertilizers are made available at affordable prices to the farmers. The Union Cabinet chaired by the Hon'ble Prime Minister has approved the proposal of the Department of Fertilizers for per Kilogram rates of Nutrient Based Subsidy (NBS) for various Nutrients that is Nitrogen (N), Phosphorus (P), Potash (i) and Sulphar (S) for Phosphatic and Potassic (P&K) fertilizers for Rabi Season — 2022-23 (from 01.10.2022 to 31.03.2023). The Subsidy approved by Cabinet for the NBS Rabi-2022 (from 01.10.2022 to 31.03.2023) will be Rs. 51,875 crore including support for indigenous fertilizer (SSP) through freight subsidy.

This will enable smooth availability of all P&K fertilizers to the farmers during Rabi 2022-23 at the subsidized / affordable prices of fertilizers and support the agriculture sector. The volatility in the international prices of fertilizers and raw materials has been primarily absorbed by the Union Government.

Steps taken by the Government to ensure adequate availability of fertilizers in the country:

- Before the commencement of each cropping season, Department of Agriculture and Farmers Welfare, (DA&FW), in consultation with all the State Governments, assesses the requirement of fertilizers. After assessment of requirement, DA&FW projects month wise & state-wise requirement of all fertilizers.
- On the basis of month-wise & State- wise projection given by DA&FW, Department of Fertilizers allocates sufficient/ adequate quantities of fertilizers to States by issuing monthly supply plan and continuously monitoring the availability.
- The movement of all major subsidized Fertilizers are monitored throughout the country by an on-line web based monitoring system called integrated Fertilizer Monitoring System (JFMS);
- The State Governments are regularly advised to coordinate with manufacturers and importers of fertilizers for streamlining the supplies through timely placement of indents for railway rakes.

-
- Regular Weekly Video Conference is conducted jointly by Department of Agriculture and Farmers Welfare (DA&FW), Ministry of Railways and Department of Fertilizers (DoF) with State Agriculture Officials and corrective actions are taken to dispatch the fertilizers as indicated by the State Governments.
 - The gap between demand (requirement) and production is met through timely imports. In case of P&K fertilizers, the imports come under Open & General license and fertilizer companies import these fertilizers based on their commercial judgments.

Measures of Support for the Fertilizer Sector

The Department of Fertilizer is implementing schemes such as Urea Subsidy Scheme, Nutrient Based Subsidy Scheme (NBS) and Direct Benefit Transfer (DBT) projects for fertilizer subsidy payments which are implemented on a PAN India basis for ensuring adequate availability of fertilizers to the farmers.

Urea Subsidy, is a part of Central Sector Scheme. The Scheme is wholly financed by the Government of India through Budgetary Support. Urea Subsidy Scheme has three components, i.e., Indigenous Urea, Imported Urea and Uniform Freight Subsidy. Indigenous urea subsidy is administered to the urea units towards indigenous urea production. Imported Urea subsidy is directed towards imports made to bridge the gap between assessed demand and indigenous production of urea in the country. Both components also include freight subsidy for movement of urea across the country under the Uniform Freight Subsidy Policy.

The objectives of the Urea Subsidy schemes are as under:

- (i) To ensure timely availability of adequate quantity of urea at statutory controlled price to the farmers across the country.
- (ii) To optimize indigenous urea production.
- (iii) To rationalize the subsidy outgo of the Government.
- (iv) To enable urea units in sustaining their operations and energy efficiency.
- (v) To fill up the gap between assessed demand and estimated production through imports.

HDPE/PP UNIT

FERTILIZER UNIT (ZINC SULPHATE)

OUR MAJOR PRODUCT PORTFOLIO

Our company is engaged in manufacturing of HDPE/PP Bags and Zinc Sulphate based products. We manufacture the products for our customers on purchase order basis. Detail of our Products are as follows:

1. HDPE (High Density Polyethylene) BAGS

Bulk Packaging of commodities (food-grains, sugar, urea, cement, etc.) has been in practice in India for years. Jute bags have been the most common traditional medium used for packaging storage, transportation and distribution of such commodities. Easy availability across the geographical terrain of India, superior and better properties as required for the end functionally, better cost economics and above all, immense reuse potential are the factors which make HDPE / PP bags as the most cost effective performance oriented alternative to jute bags for packaging of such bulk commodities. Above all, availability such as HDPE / PP bag is independent of the performance of monsoon and location of specify geographical region.

Plastic Woven Sack made High Density Polyethylene (HDPE) or Polypropylene (PP), outperform their traditional counterparts (jute bags) due to superiority exhibited in the following key functional areas:

- Low seepage loss, yet option of breathing requirement not sacrificed.
- Moisture resistant; hence most suitable packaging for hygroscopic substances like fertilizers and sugar.
- Water, insect and rodent resistant, thus allowing the filled bags to be stored in warehouses and godowns without having the fear of deterioration and subsequent wastage.
- Completely compatible with edible materials like food grains, sugar, etc. thus eliminating the potential health hazard which is normally associated with the jute bags (due to the fact that non-edible mineral oil used in jute manufacture) and migration of jute fiber is present in the final product.

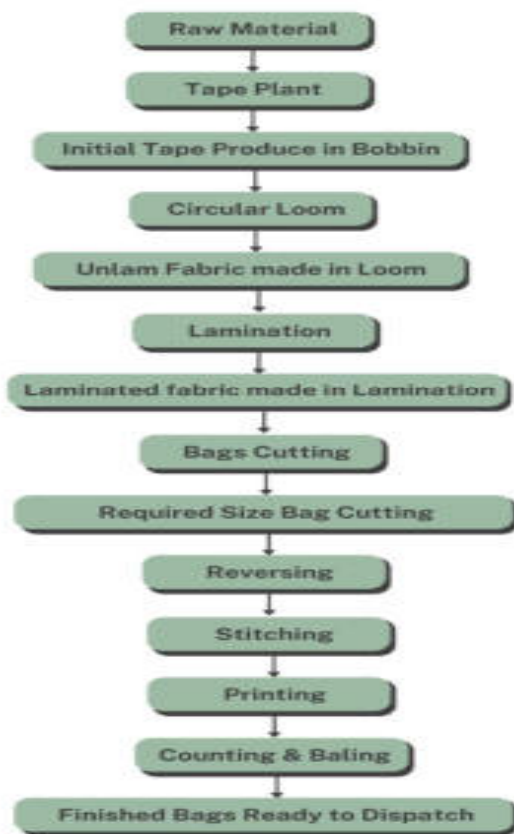

Further, being an industrial product where technological development is ever happening the characteristics of HDPE / PP bags can be tailor made to the desired end application to suit the product / customer.

In the Indian context, HDPE / PP offer an effective and cheaper alternative packaging of bulk commodities. Being abundantly available across the country and round the year, and at competitive rates, HDPE / PP offers an excellent opportunity to reduce the extent of subsidy the central exchequer is providing towards bulk packaging. Purely from technical performance angle, HDPE /PP out perform jute bags in most of functional needs of packaging.

Process Flow Chart of HDPE Bags Manufacturing

Raw Material

Raw material HDPE & LDPE is easily available as the same is produced by major manufacturers such as Reliance (Hazira), GAIL (Patta near Etawah), IOC (Panipat), Haldia Petrochemicals (Haldia).

Process flow for the manufacturing of HDPE bags is as under:-

- 1. Raw Material:** Acquire high-density polyethylene (HDPE) resin in granular form.
- 2. Tape Plant:** The granules of HDPE/PP are fed to the extruder hopper, where they are plasticized and the melt flow is passed through a T-die. Films formed in slit into the form of molten polymer strips. These strips are then oriented by stretching them under condition at a predetermined ratio. Finally, the tapes are wound on cheese winders.
- 3. Initial Tape Production in Bobbin:** Wind the extruded HDPE tapes onto bobbins, forming compact rolls for convenient handling and subsequent use in the manufacturing process of HDPE bags.
- 4. Circular Loom:**
 - Load the bobbins onto circular looms.
 - Weave the tapes into tubular fabrics of cloth
- 5. Unlaminated Fabric Production in Loom:** The circular loom produces unlaminated HDPE fabric.
- 6. Lamination:**
 - Introduce the unlaminated fabric to the lamination process.
 - Apply a lamination layer for added strength, barrier properties, or printability.

7. **Laminated Fabric Production:** The lamination process results in a fabric with improved properties.
8. **Bags Cutting, Stitching & Printing:** After cutting the laminated fabric into sheets of specified bag dimensions, the next step involves meticulous folding and stitching of the fabric sheets. This process meticulously forms the foundational structure of the HDPE bags. Subsequently, branding or informative printing is applied to the stitched bags, enhancing their visual appeal.
9. **Packaging:** Packing the finished HDPE bags in bundles or boxes for storage and transportation.

Specifications

For usage under Indian environment and specificities of the Indian industry, certain technical specifications have been considered. The critical parameters as specified are adequate to hold the packed material without any danger of breakage, etc of the sack itself. The specifications lay down for plastic woven sacks for cement and fertilizer already exist (BIS standards). Specifications for sugar and food grains are also being prepared by BIS.

2. PP (Polypropylene) BAGS

Product & Its Use

The Company produces PP Woven Fabric, various type of Bags required for the packing of fertilizers, food grain, seeds, cement etc. PP woven fabric is used for making sacks, tarpaulins, ground cover fabric, FIBC, Big bags etc., Such bags substitute traditional industrial packaging solutions such as paper, Jute Fibre or Rigid Packaging etc. These bags are indeed ideal packaging solutions carrying volumes of multiple items and fill the gap between small packages and bulk.

Nature of Industry

Polypropylene (PP) Fabric and Bags for Packing Fertilizers, Cement, food grains etc. PP woven fabric and bags for fertilizers, cement, food grains etc.

Raw Material, Packing Material & Source: Poly Propylene (PP) resin/ granule are the main raw material for the project.

Major source of raw materials (Granules) are- We source our raw material for the manufacturing of PP (Polypropylene) Bags from well-renowned suppliers of India after thorough vendor screening and quality testing.

Apart from above, Our Company imported PP Granules (raw materials) from Saudi Arabia, Malaysia & South Korea etc. Besides PP, master batch for colouring, filler and UV is also required, which is all available in and around factory areas i.e. Delhi, Kanpur in good quantities.

PP BAGS MANUFACTURING

Manufacturing Process of fabric/bags

- PP Granule is the main raw- materials for the project. This is blended with filler, UV and colour master- batches in the desired proportion and fed into the extruder through its hopper. The plastic mixture melts inside the extruder and is pushed out by the screw barrel to a T- die which is about 2000 MM wide.
- Plastic film of the desired thickness comes out from the T- die, which then enters a chilled water bath to allow the hot film to cool down. The film is then passed through cutters / slitters, which cuts the film into 312 tapes of 2- 3 mm width.
- The tape is then pulled/stretched and is passed through a set of hot and cold gadgets (polished rollers) so that it is given controlled properties like tenacity and elongation. The yarn is passed through a heat chamber (Hot plate) of 6 meters under controlled conditions, where molecular structure of the stretched tape is re- aligned to make it stable. Finally the yarn(tape) is wound at high speed on cheese winders, which will go in for weaving. The yarn is ready.
- About 720 cheeses are loaded in the creel of the circular loom and woven into fabric as per requirement. Fabrics are composed of two sets of yarns. One set of yarns, the wrap runs along the length of the fabric. The other set of yarns, the fill or weft is perpendicular to the warp. Woven fabrics are held together by weaving the warp and the fill yarns over and under each other.
- The woven plastic fabric is produced using PP in wide range of specifications depending on the end- use application.
- The Fabric is cut on one side to produce wide width fabric and wound on tubes.

-
- The PP woven fabric meetings to certain specifications are also called GEO Textiles/ technical textile. The fabric is flat wound on paper/ cast iron tubes in standard length of 2000-3000 meters and wrapped.
 - Roll to roll printing is arranged in printing machine and thereafter printed rolls are placed in BCS for cutting and stitching of bags in desired sizes and as per specifications set by the buyer. 500 nos. of bags are stacked in Bales, wrapped and marked as per the dispatch details and moved out of factory.
 - To produce multicolour BOPP sandwiched bag, reverse printing is done on BOPP film which is then pasted on PP Woven fabric in a lamination plant. The printed bag is then cut to size and stitched as per user's requirement.

3. Fertilisers (Zinc Sulphate)

Zinc (Zn) is an essential trace element for humans, animals and plants. Zinc is essential for the normal healthy growth and reproduction of plants, animals and humans and when the supply of plant-available zinc is inadequate, crop yields are reduced and the quality of crop products is frequently impaired. Zinc is one among the seven Micronutrient elements that is indispensable for plant growth. Its presence activates a series of enzymes responsible for maintaining the course and tempo of several vital growth events. Zinc asserts in protein synthesis and production of auxins (growth promoting chemicals). Therefore, a low zinc supply encourages protein deficiency and dwarfism in plants. The net results of a zinc deficiency in soils are stunted crop plants, prolonged duration and poor yields. A severe deficiency can kill the crop.

Zinc plays a key role as a structural constituent or regulatory co-factor of a wide range of different enzymes in many important biochemical pathways and these are mainly concerned with:

- a) Carbohydrate metabolism, both in photosynthesis and in the conversion of sugars to starch
- b) Protein metabolism,
- c) Auxin (growth regulator) metabolism
- d) Pollen formation,
- e) The maintenance of the integrity of biological membranes,
- f) The resistance to infection by certain pathogens.

ZINC MANUFACTURING PROCESS

Zinc Sulphate Product:

1. Zinc Sulphate Monohydrate
2. Zinc Sulphate Heptahydrate

Raw Materials:

1. Zinc Ash: This is a cost-effective source of zinc oxide. Zinc ash, which is a by-product of galvanizing units and other processes like zinc metal recycling and die-casting, contains various impurities such as iron, aluminium, lead, and chloride. Controlling these impurities is crucial for ensuring a high-quality final product.
2. Sulphuric Acid (Technical grade 98.5% pure): Reacts with zinc ash to produce zinc sulphate.

Zinc Ash Specifications:

1. Zinc (45 - 72%)
2. Lead (Pb) 8% max (Lesser the better)
3. Iron (Fe) 5% max
4. Chlorides (Cl) 25 - 30 max (Less the better)

Zinc sulphate, available in two primary forms—zinc sulphate heptahydrate ($\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$) and zinc sulphate monohydrate ($\text{ZnSO}_4 \cdot \text{H}_2\text{O}$)—is a widely used agricultural micronutrient. These variants are typically referred to as hepta and mono, respectively. The specifications for both forms are outlined in the Fertilizer (Control) Order, 1985, which must be adhered to during production.

The principal raw materials for manufacturing zinc sulphate are zinc ash and sulphuric acid. Zinc in its metal form reacts very slowly with sulphuric acid, so zinc oxide is preferred due to its faster reaction rate and reduced hydrogen gas evolution.

Manufacturing Process:

1. Reaction:

- Zinc ash is reacted with dilute sulphuric acid in an agitated reactor. Due to the presence of insoluble materials in zinc ash, the effectiveness of the reaction depends on proper agitation. As the reaction proceeds, the slurry density increases due to aggregate solids.
- The reaction is carefully controlled to maximize the removal of impurities, and the reaction endpoint is closely monitored.

2. Separation:

- The reaction mixture is transferred to a settling tank where flocculants are added to expedite the separation of solid impurities.
- Once the reaction is complete, the slurry is pumped to a filter press, which hydraulically separates the solid contaminants from the clear solution of zinc sulphate.

3. Filtration and Washing:

- The separated mud from the filter press is washed with a dilute solution to recover and reuse the product salts.

4. Product Processing:

○ For Monohydrate Production:

- The clear solution is directed to a spray dryer, where it is sprayed into hot air. The water evaporates, leaving behind a dry powder of zinc sulphate monohydrate.
- The dried powder is screened to separate oversize and undersize particles before being stored in a silo. It is then fed into a pouch packing machine, where it is bagged.

○ For Heptahydrate Production:

- The clear solution is transferred to crystallizers, which are cooled using a cold water jacket. Zinc sulphate heptahydrate crystals precipitate out.
- The solid-liquid mixture is then processed in centrifugal machines to separate the crystals. The liquid is recycled back to the reaction circuit, while the solid crystals are sent to a bagging machine for packaging.

The entire process is designed to ensure the production of high-quality zinc sulphate with minimal impurities, meeting the specifications set forth in the Fertilizer (Control) Order, 1985.

Zinc Sulphate Monohydrate

We produce and Supply Zinc Sulphate Monohydrate, which is widely used in the veterinary and poultry industry for making several formulations. Tested for quality, purity, and composition, the Zinc Sulphate Monohydrate supplied by us has helped us to carve a niche in the markets across the country.

Zinc Sulphate Heptahydrate

Zinc Sulphate Heptahydrate is a crystalline compound containing seven water molecules, commonly used as a fertilizer to correct zinc deficiencies in soils. It plays a crucial role in promoting plant growth, enhancing crop yields, and ensuring optimal nutrient absorption. It is used in calico-printing, preserving wood and skins, bleaching paper, manufacturing lithopone and other zinc salts, clarifying glue, and also as a reagent in analytical chemistry.

BUSINESS AND/OR KEY INDUSTRY AND/OR TRADE RELATED LAWS AND REGULATIONS

Fertilizer Subsidy Policy for Phosphatic & Potassic (P&K) Fertilizers:

Since independence, the Government of India has been regulating sale, price and quality of fertilizers. For this purpose, the Government of India has passed the Fertilizer Control Order (FCO) under the Essential commodity Act (EC Act) in the year 1957. No subsidy was paid on Fertilizers till 1977 except Potash for which subsidy was paid only for a year in 1977. On the recommendation of the Maratha Committee, the Government had introduced the Retention Price Scheme (RPS) for nitrogenous fertilizers in November 1977. Subsequently, RPS was extended to phosphatic and other complex fertilizers from February 1979 and to Single Super Phosphate from May 1982, which continued up to 1991. Later on, the subsidy was also extended to imported phosphatic and potassic (P&K) fertilizers. Fearing imbalance fertilization of the soil, unaffordability by farmers due to increase in phosphatic and potassic fertilizer prices, Government of India announced ad hoc Concession Scheme for phosphatic and potassic fertilizers from Rabi 1992 to cushion the impact of price hike with a view to encourage balanced fertilizer consumption. Initially, the ad-hoc Concession Scheme was applicable on DAP, MOP, NPK Complex fertilizers. This scheme was also extended to SSP from 1993-94. The basic purpose/objective of the Concession Scheme for P&K fertilizers has been to provide P&K fertilizers to the farmers at affordable prices so as to increase the food productivity in the country through balanced use of fertilizers. The concession scheme was also aimed at ensuring a reasonable rate of return on the investments made by the entrepreneurs in the fertilizer sector.

ENVIRONMENTAL LEGISLATIONS

National Environmental Policy, 2006

This Policy seeks to extend the coverage, and fill in gaps that still exist, in light of present knowledge and accumulated experience. This policy was prepared through an intensive process of consultation within the Government and inputs from experts. It does not displace, but builds on the earlier policies. It is a statement of India's commitment to making a positive contribution to international efforts. This is a response to our national commitment to a clean environment, mandated in the Constitution in Articles 48 A and 51 A (g), strengthened by judicial interpretation of Article 21. The dominant theme of this policy is that while conservation of environmental resources is necessary to secure livelihoods and well-being of all, the most secure basis for conservation is to ensure that people dependent on particular resources obtain better livelihoods from the fact of conservation, than from degradation of the resource.

For inter-state transactions and imported goods or services, an Integrated GST (IGST) is levied by the Central Government. INTELLECTUAL PROPERTY RIGHTS

Intellectual property in India enjoys protection under both common law and statutes. Under statutes, India provides for patent protection under the Patents Act, 1970, copyright protection under the Copyright Act, 1957 and trademark protection under the Trade Marks Act, 1999. These enactments provide for the protection of intellectual property by imposing civil and criminal liability for infringement. In addition to the domestic laws, India is party to several international intellectual property related instruments including the Patent Cooperation Treaty, 1970, the Paris Convention for the Protection of Industrial Property, 1883, the Berne Convention for the Protection of Literary and Artistic Works, 1886, the Universal Copyright Convention adopted at Geneva in 1952, the International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations, 1961 and as a member of the World Trade Organisation is a signatory to the Agreement on Trade Related aspects of Intellectual Property Rights.

The Trade Marks Act, 1999 (“Trade Marks Act”)

The Trade Marks Act governs the statutory protection of trademarks and prevention of the use of fraudulent marks in India. Indian law permits the registration of trademarks for both goods and services. Under the provisions of the Trade Marks Act, an application for trademark registration may be made with the Trade Marks Registry by any person or persons claiming to be the proprietor of a trade mark, whether individually or as joint applicants, and can be made on the basis of either actual use or intention to use a trademark in the future. Once granted, a trademark registration is valid for 10 years unless cancelled, subsequent to which, it can be renewed. If not renewed, the mark lapses and the registration is required to be restored to gain protection under the provisions of

the Trade Marks Act. The Trade Marks Act prohibits registration of deceptively similar trademarks and provides for penalties for infringement, falsifying and falsely applying trademarks among others. Further, pursuant to the notification of the Trade Marks (Amendment) Act, 2010, simultaneous protection of trademark in India and other countries has been made available to owners of Indian and foreign trademarks. It also seeks to simplify the law relating to the transfer of ownership of trademarks by assignment or transmission and to bring the law in line with international practices.

Copyright Act, 1957 (“Copyright Act”)

The Copyright Act, 1957, along with the Copyright Rules, 1958, (collectively, “Copyright Laws”) governs copyrights subsisting in original literary, dramatic, musical or artistic works, cinematograph films, and sound recordings, including computer programmes, tables and compilations including computer databases. Computer programme constitutes a literary work under Indian law and is afforded copyright protection and the owner of such computer programme becomes entitled to protect his works against unauthorized use and misappropriation of the copyrighted work or a substantial part thereof. Any act of this nature entitles the copyright owner to obtain relief from a court of law including injunction, damages and accounts of profits. Further, copyright registration is not a prerequisite for acquiring or enforcing a copyright in an otherwise copyrightable work and once registered, copyright protection remains valid until expiry of sixty years from the demise of the author. Reproduction of a copyrighted computer programme for sale or hire or trade exhibit in public or distribution or commercial rental, offer for sale or commercial rental, issuing copy(ies) of the computer programme or making an adaptation of the work without consent of the copyright owner amounts to infringement of the copyright. However, the Copyright Act prescribes certain fair use exceptions which permit certain acts, which would otherwise be considered copyright infringement.

The Patents Act, 1970

The Patents Act, 1970 (“Patents Act”) governs the patent regime in India. Being a signatory to the Agreement on Trade Related Aspects of Intellectual Property Rights, India is required to recognize product patents as well as process patents. In addition to the broad requirement that an invention satisfy the requirements of novelty, utility and non-obviousness in order for it to avail patent protection, the Patents Act further provides that patent protection may not be granted to certain specified types of inventions and materials even if they satisfy the above criteria. Section 39 of the Patents Act also prohibits any person resident in India from applying for a patent for an invention outside India without making an application for a patent for the same invention in India. The term of a patent granted under the Patents Act pursuant to Section 53 is for a period of twenty years from the date of filing of the application for the patent. A patent shall cease to have effect if the renewal fee is not paid within the period prescribed for the payment of such renewal fee. While the Patents Act prohibits patentability of a ‘computer programme’ as such, computer programmes in combination with a novel hardware could be considered patentable depending on the substance of the invention and applicable provisions of the Patents Act. Computer programmes on their own are excluded from patent protection and are protected as a literary work under the Copyright Laws. In terms of the Patent Act, the patentee holds the exclusive right to prevent third parties from the using, offering for sale, selling or importing for such purposes, the patented product or product obtained directly by a process patented in India.

It authorizes the government to formulate as well as announce the export and import policy and to keep amending the same on a timely basis. The government has also been given wide power to prohibit, restrict and regulate the exports and imports in general as well as specified cases of foreign trade. The FTDR read with the Foreign Trade Policy, 2023, prohibits anybody from undertaking any import or export except under an importer-exporter code (“IEC”) number granted by the Director General of Foreign Trade. Hence, every entity in India engaged in any activity involving import/export is required to obtain an IEC unless specifically exempted from doing so. The IEC shall be valid until it is cancelled by the issuing authority. An IEC number allotted to an applicant is valid for all its branches, divisions, units and factories. Foreign Exchange Management Act, 1999 & Rules thereunder

Foreign investment in India is governed primarily by the provisions of the FEMA, and the rules, regulations and notifications thereunder, as issued by the RBI from time to time and the FEMA Rules and the Consolidated FDI Policy. In terms of the Consolidated FDI Policy, foreign investment is permitted (except in the prohibited sectors) in Indian companies either through the automatic route or the Government route, depending upon the sector in which the foreign investment is sought to be made. In terms of the Consolidated FDI Policy, the work of granting government approval for foreign investment under the Consolidated FDI Policy and FEMA has now been entrusted to the concerned administrative ministries/departments.

The Foreign Exchange Management (Transfer or Issue of Security by a Person Resident outside India) Regulations, 2017 as amended in 2019, provide that the total holding by any individual NRI, on a repatriation basis, shall not exceed 5 percent of the total paid-up equity capital on a fully diluted basis or shall not exceed five percent of the paid-up value of each series of debentures or preference shares or share warrants issued by an Indian company and the total holdings of all NRIs and OCIs put together shall not exceed 10% of the total paid-up equity capital on a fully diluted basis or shall not exceed 10% of the paid-up value of each series of debentures or preference shares or share warrants; provided that the aggregate ceiling of 10 percent may be raised to 24 percent if a special resolution to that effect is passed by the general body of the Indian company.

The Conservation of Foreign Exchange and Prevention of Smuggling Activities Act, 1974

The Act also aims to control smuggling activities and other issues in relation to these activities. COFEPOSA confers power on the Central and the State Governments to issue orders for detaining a person if it is satisfied that the person has acted detrimental to the protection of foreign exchange. Such an order shall be issued by the Joint Secretary to the Central Government or Secretary to the State Government or any senior officer authorized by the Government.

Government grants received earlier and relating to the investment in plant and equipment at the factory are included in non-current liabilities as deferred income and are credited to profit or loss on a straight-line basis over a period of five years and presented within other income.

5 Income tax

The income tax expense or credit for the period is the tax payable on the current period's taxable income based on the applicable income tax rate for each jurisdiction adjusted by changes in deferred tax assets and liabilities attributable to temporary differences and to unused tax losses.

The current income tax charge is calculated on the basis of the tax laws enacted or substantively enacted at the end of the reporting period generating taxable income. Management periodically evaluates positions taken in tax returns with respect to situations in which applicable tax regulation is subject to interpretation. It establishes provisions where appropriate on the basis of amounts expected to be paid to the tax authorities.

Deferred income tax is provided in full, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the consolidated financial statements. Deferred income tax is determined using tax rates (and laws) that have been enacted or substantially enacted by the end of the reporting period and are expected to apply when the related deferred income tax asset is realised or the deferred income tax liability is settled.

Deferred tax assets are recognised for all deductible temporary differences and unused tax losses only if it is probable that future taxable amounts will be available to utilise those temporary differences and losses.

Provision for Income tax for the current year is calculated as per Minimum Alternative Tax u/s 115JB of Income Tax Act 1961

When parts of an item of property, plant and equipment having significant cost have different useful lives, then they are accounted for as separate items (major components) of property, plant and equipment.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost of the item can be measured reliably. All other repairs and maintenance cost are charged to the Consolidated statement of profit and loss during the period in which they are incurred.

7 Depreciation methods, estimated useful lives and residual value

Depreciation is calculated using the written down value method to allocate their cost, net of their residual values, over their estimated useful lives as per Schedule II of The Companies Act, 2013.

The useful lives have been determined as specified by Schedule II to the Companies Act; 2013. The residual values are not more than 5% of the original cost of the asset. The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at the end of each reporting period.

8 Impairment of Assets

Assessment for impairment is done at each Balance Sheet date as to whether there is any indication that a non-financial asset may be impaired. Indefinite life intangible assets are subject to review for impairment annually or more frequently if events or circumstances indicate that it is necessary.

For the purpose of assessing impairment, the smallest identifiable group of assets that generates cash inflows from continuing use that are largely independent of the cash inflows from other assets or groups of assets is considered as a cash generating unit. Goodwill acquired in a business combination is, from the acquisition date, allocated to each of the Company's cash generating units that are expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the acquiree are assigned to those units.

The impairment loss is allocated first to reduce the carrying amount of goodwill (if any) allocated to the cash generating unit and then to the other assets of the unit, pro rata based on the carrying amount of each asset in the unit. Recoverable amount is higher of an asset's or cash generating unit's value in use and its fair value less cost of disposal. Value in use is estimated future cash flows expected to arise from the continuing use of an asset or cash generating unit and from its disposal at the end of its useful life discounted to their present value using a post-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining fair value less costs of disposal, recent market transactions are considered. If no such transactions can be identified, an appropriate valuation model is used.

Assessment is also done at each Balance Sheet date as to whether there is any indication that an impairment loss recognised for an asset in prior accounting periods may no longer exist or may have decreased. Basis the assessment a reversal of an impairment loss for an asset other than goodwill is recognised in the Consolidated statement of profit and loss.

28 **Financial Assets**

Financial assets are recognised when the Company becomes a party to the contractual provisions of the instrument

On initial recognition, a financial asset is recognised at fair value. In the case of financial assets which are recognised at fair value through profit and loss (FVTPL), its transaction cost is recognised in the consolidated statement of profit and loss. In other cases, the transaction cost is attributed to the acquisition value of the financial asset.

Financial assets are subsequently classified and measured at

- Amortised Cost method
- Fair Value through other comprehensive Income
- Fair Value through Profit / Loss A/c

Financial assets are not reclassified subsequent to their recognition, except during the period the Group changes its business model for managing financial assets.

Trade Receivables and Loans:

Trade receivables are initially recognised at fair value. Subsequently, these assets are held at amortised cost, using the effective interest rate (EIR) method net of any expected credit losses. The EIR is the rate that discounts estimated future cash income through the expected life of financial instrument.

Measured at amortised cost:

Financial assets that are held within a business model whose objective is to hold financial assets in order to collect contractual cash flows that are solely payments of principal and interest, are subsequently measured at amortised cost using the 'EIR' method less impairment, if any. The amortisation of EIR and loss arising from impairment, if any is recognised in the Statement of Profit and Loss

Measured at fair value through other comprehensive income (FVOCI):

Financial assets that are held within a business model whose objective is achieved by both, selling financial assets and collecting contractual cash flows that are solely payments of principal and interest, are subsequently measured at fair value through other comprehensive income. Fair value movements are recognised in the other comprehensive income (OCI). Interest income measured using the EIR method and impairment losses, if any are recognised in the Consolidated Statement of Profit and Loss. On derecognition, cumulative gain or loss previously recognised in OCI is reclassified from the equity to 'other income' in the Consolidated Statement of Profit and Loss

Measured at fair value through profit or loss (FVTPL):

A financial asset not classified as either amortised cost or FVOCI, is classified as FVTPL. Such financial assets are measured at fair value with all changes in fair value, including interest income and dividend income if any, recognised as 'other income' in the Consolidated Statement of Profit and Loss.

Equity Instruments:

All investments in equity instruments classified under financial assets are initially measured at fair value, the Group may, on initial recognition, irrevocably elect to measure the same either at FVOCI or FVTPL.

The Company makes such election on an instrument-by-instrument basis. Fair value changes on an equity instrument is recognised as 'other income' in the Consolidated Statement of Profit and Loss unless the Company has selected to measure such instrument at FVOCI. Fair value changes excluding dividends, on an equity instrument measured at FVOCI are recognised in OCI. Amounts recognised in OCI are not subsequently reclassified to the Statement of Profit and Loss. Dividend income on the investments in equity instruments are recognised as 'other income' in the Statement of Profit and Loss.

Derecognition of Financial Assets

The Company derecognises a financial asset when the contractual rights to the cash flows from the financial asset expire, or it transfers the contractual rights to receive the cash flows from the asset.

Offsetting financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the balance sheet, if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle them on a net basis or to realise the assets and settle the liabilities simultaneously.

Impairment of Financial Asset

The Group applies expected credit loss (ECL) model for measurement and recognition of loss allowance on the following:

In case of trade receivables, the Group follows a simplified approach wherein an amount equal to lifetime ECL is measured and recognised as loss allowance.

In case of other assets (listed as ii above), the Group determines if there has been a significant increase in credit risk of the financial asset since initial recognition. If the credit risk of such assets has not increased significantly, an amount equal to 12-month ECL is measured and recognised as loss allowance. However, if credit risk has increased significantly, an amount equal to lifetime ECL is measured and recognised as loss allowance.

Subsequently, if the credit quality of the financial asset improves such that there is no longer a significant increase in credit risk since initial recognition, the Group reverts to recognising impairment loss allowance based on 12-month ECL

ECL is the difference between all contractual cash flows that are due to the Group in accordance with the contract and all the cash flows that the Group expects to receive (i.e., all cash shortfalls), discounted at the original effective interest rate

Lifetime ECL are the expected credit losses resulting from all possible default events over the expected life of a financial asset. 12-month ECL are a portion of the lifetime ECL which result from default events that are possible within 12 months from the reporting date.

Notes to Accounts forming part of Restated Consolidated Financial Statements

As a practical expedient, the Group uses a provision matrix to measure lifetime ECL on its portfolio of trade receivables. The provision matrix is prepared based on historically observed default rates over the expected life of trade receivables and is adjusted for forward-looking estimates. At each reporting date, the historically observed default rates and changes in the forward-looking estimates are updated.

ECL allowance recognised (or reversed) during the period is recognised as income/ expense in the Statement of Profit and Loss under the head 'Other expenses'.

Write-off

The gross carrying amount of a financial asset is written off when the company has no reasonable expectations of recovering the financial asset in its entirety or a portion thereof

Initial recognition and measurement

Financial liabilities are recognised when the Company becomes a party to the contractual provisions of the instrument. Financial liabilities are initially measured at the amortised cost unless at initial recognition, they are classified as fair value through profit and loss. In case of trade payables, they are initially recognised at fair value

Subsequent measurement

Financial liabilities are subsequently measured at amortised cost using the EIR method. Financial liabilities carried at fair value through profit or loss are measured at fair value with all changes in fair value recognised in the Statement of Profit and Loss

Derecognition

A financial liability is derecognised when the obligation specified in the contract is discharged, cancelled or expires. The difference between the carrying value of the financial liability and the consideration paid is recognised in Statement of profit and loss.

Other financial assets and liabilities

Cash and cash equivalents, trade receivables, investments in term deposits, other financial assets (except derivative financial instruments), consignment receivable, trade payables, consignment payable and other financial liabilities (except derivative financial instruments) have fair values that approximate to their carrying amounts due to their short-term nature.

Our operations result in us being exposed to interest rates risk on account of borrowings. The interest rates risk may affect our income and expenses, or our financial position and cash flows.

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Our exposure to the risk of changes in market interest rates relates primarily to our borrowings with floating interest rates.

Illustration of the Book Building and Price Discovery Process:

Bidders should note that this example is solely for illustrative purposes and is not specific to the Issue; it also excludes Bidding by Anchor Investors. Bidders can bid at any price within the Price Band. For instance, assume a Price Band of ₹20 to ₹ 24 per share, Issue size of 3,000 Equity Shares and receipt of five Bids from Bidders, details of which are shown in the table below. The illustrative book given below shows the demand for the Equity Shares of the Issuer at various prices and is collated from Bids received from various investors.

Bid Quantity	Bid Amount (₹)	Cumulative Quantity	Subscription
500	24	500	16.67%
1,000	23	1,500	50.00%
1,500	22	3,000	100.00%
2,000	21	5,000	166.67%
2,500	20	7,500	250.00%

The price discovery is a function of demand at various prices. The highest price at which the Issuer is able to Issue the desired number of Equity Shares is the price at which the book cuts off, i.e., ₹ 22.00 in the above example. The Issuer, in consultation with the BRLM, may finalise the Issue Price at or below such Cut-Off Price, i.e., at or below ₹ 22.00. All Bids at or above this Issue Price and cut-off Bids are valid Bids and are considered for allocation in the respective categories.
